The scope of work includes an interior fit-out of an existing shell space with a raised floor data center, electrical support rooms, storage, and a new egress corridor. This includes the addition of two new air cooled chillers, two new diesel generators located inside the building, along with new electrical distribution from the existing electrical service and new cooling inside the data hall. A new fire protection valve will be added for a double interlock pre-action system for the new data hall infrastructure.
