18.06.210 Development

“Development” means the construction, reconstruction, conversion, structural alteration, relocation, or enlargement of any structure that requires a building permit. “Development” does not include dismantling or removing structures if there is no other associated development or re-development.

18.06.330 Flood-plain

“Flood-plain” means that land area susceptible to inundation with a one percent chance of being equaled or exceeded in any given year (synonymous with 100-year flood plain). The limit of this area shall be based upon flood ordnance regulation maps or a reasonable method that meets the objectives of the Shoreline Management Act.

18.06.338 Floodway

“Floodway” means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than one foot.

“Floodway” means the area that has been established in effective federal emergency management agency flood insurance rate maps or floodway maps. The floodway does not include lands that can reasonably be expected to be protected from flood waters by flood control devices maintained by or maintained under a license from the federal government, the state, or a political subdivision of the state.

18.06.425 High Impact Environment

“High impact environment” means the area between the lowimpact environment and a point 200 feet landward from the mean high water mark. (Ord. 1758 §1 (part), 1995)

18.06.550 Low-Impact Environment

“Low-impact environment” means the area between the River Environment and a point 100 feet landward from the mean high water mark having environmentally protective land use regulations as established in the Shoreline Overlay District chapter of this title.

18.06.494 Levee, Minimum Profile

“Levee, minimum profile” means the minimum levee profile for any new or reconstructed levees is the King County “Briscoe Levee” profile 2.5:1 overall slope with 15 foot mid slope bench for maintenance access and native vegetation plantings.

18.06.691 River Channel

“River channel” means that area of the river environment lying riverward of the mean high water mark. (Ord. 1758 §1 (part), 1995)

18.06.695 River Environment

“River environment” means the area between the mean high water mark and a point 40 feet landward from the mean high water mark, having the most environmentally protective land use regulations as established in the Shoreline Overlay District chapter of this title.

18.06.755 Shoreline

“Shoreline” means the line at mean high water surrounding any body of water of 20 acres or larger where the mean flow is 20 cubic feet per second or greater. (Ord. 1758 §1 (part), 1995)

18.06.757 Shorelines or Shoreline Areas

“Shorelines” or “Shoreline areas” means all “shorelines of the state” and “shorelands” as defined in RCW 90.58.030.
"Substantial development" means any development of which the total cost or fair market value exceeds $5,000 or any development that materially interferes with the normal public use of the water or shorelines of the state. The dollar threshold established in this definition must be adjusted for inflation by the Office of Financial Management every five years, beginning July 1, 2007, based upon changes in the Consumer Price Index during that time period. "Consumer Price Index" means, for any calendar year, that year’s annual average Consumer Price Index, Seattle, Washington area, for urban wage earners and clerical workers, all items, compiled by the Bureau of Labor and Statistics, United States Department of Labor. The following shall not be considered substantial developments for the purpose of the Shoreline Management Act, but are not exempt from complying with the substantive requirements of this Shoreline Master Program:

1. Normal maintenance or repair of existing structures or developments, including repair of damage caused by accident, fire, or elements.
2. Emergency construction necessary to protect property from damage by the elements.
3. Construction and practices normal or necessary for farming, irrigation, and ranching activities, including agricultural service roads and utilities on shorelands, and the construction and maintenance of irrigation structures including but not limited to head gates, pumping facilities, and irrigation channels. A feedlot of any size, all processing plants, other activities of a commercial nature, and alteration of the contour of the shorelands by leveling or filling other than that which results from normal cultivation, shall not be considered normal or necessary farming or ranching activities. A feedlot shall be an enclosure or facility used or capable of being used for feeding livestock hay, grain, silage, or other livestock feed, but shall not include land for growing crops or vegetation for livestock feeding and grazing, nor shall it include normal livestock wintering operations.
4. Construction or modification of navigational aids such as channel markers and anchor buoys.
5. Construction on shorelands by an owner, lessee, or contract purchaser of a single family residence for his or her family, which residence does not exceed a height of 35 feet above average grade level and which meets all requirements of the state agency or local government having jurisdiction thereof, other than requirements imposed pursuant to this chapter.
6. Construction of a dock, including a community dock, designed for pleasure craft only, for the private noncommercial use of the owner, lessee, or contract purchaser of single and multiple family residences. This exception applies if either:
   a. In salt waters, the fair market value of the dock does not exceed $2,500; or
   b. In fresh waters, the fair market value of the dock does not exceed $11,200 for docks that are constructed to replace existing docks, and are of equal or lesser square footage than the existing dock being replaced, or
   c. $1,120 for all other docks constructed on freshwaters, but
   d. subsequent construction having a fair market value exceeding $2,500 occurs within five years of completion of the prior construction, and the combined fair market value of the subsequent and prior construction exceeds the amount specified above, the subsequent construction shall be considered a substantial development for the purpose of this chapter.
7. Operation, maintenance, or construction of canals, waterways, drains, reservoirs, or other facilities that now exist or are hereafter created or developed as a part of an irrigation system for the primary purpose of making use of system waters, including return flow and artificially stored groundwater for the irrigation of lands.
8. The marking of property lines or corners on state-owned lands, when such marking does not significantly interfere with normal public use of the surface of the water.
9. Operation and maintenance of any system of dikes, ditches, drains, or other facilities existing on September 8, 1975, which were created, developed, or utilized primarily as a part of an agricultural drainage or diking system.
10. Site exploration and investigation activities that are prerequisite to preparation of an application for development authorization under this chapter, if:
   a. The activity does not interfere with the normal public use of the surface waters;
b. The activity will have no significant adverse impact on the environment including, but not limited to, fish, wildlife, fish or wildlife habitat, water quality, and aesthetic values;

c. The activity does not involve the installation of a structure, and upon completion of the activity the vegetation and land configuration of the site are restored to conditions existing before the activity;

d. A private entity seeking development authorization under this section first posts a performance bond or provides other evidence of financial responsibility to the local jurisdiction to ensure the site is restored to preexisting conditions; and

e. The activity is not subject to the permit requirements of RCW 90.58.550 (Oil and Natural Gas exploration in marine waters).

11. The process of removing or controlling an aquatic noxious weed, as defined in RCW 17.26.020, through the use of an herbicide or other treatment methods applicable to weed control that are recommended by a final environmental impact statement published by the Department of Agriculture or the department jointly with other state agencies under chapter 43.21C RCW.

12. Watershed restoration projects, which means a public or private project authorized by the sponsor of a watershed restoration plan that implements the plan or a part of the plan and consists of one or more of the following activities:

a. A project that involves less than ten miles of stream reach, in which less than twenty-five cubic yards of sand, gravel, or soil is removed, imported, disturbed or discharged, and in which no existing vegetation is removed except as minimally necessary to facilitate additional plantings;

b. A project for the restoration of an eroded or unstable stream bank that employs the principles of bioengineering, including limited use of rock as a stabilization only at the toe of the bank, and with primary emphasis on using native vegetation to control the erosive forces of flowing water; or

c. A project primarily designed to improve fish and wildlife habitat, remove or reduce impediments to migration of fish, or enhance the fishery resource available for use by all of the citizen of the state, provided that any structure, other than a bridge or culvert or instream habitat enhancement structure associated with the project, is less than two hundred square feet in floor area and is located above the ordinary high water mark of the stream.

13. Watershed restoration plan, which means a plan, developed or sponsored by the department of fish and wildlife, the department of ecology, the department of natural resources, the department of transportation, a federally recognized Indian tribe acting within and pursuant to its authority, a city, a county or a conservation district that provides a general program and implementation measures or actions for the preservation, restoration, re-creation, or enhancement of the natural resources, character, and ecology of a stream, stream segment, drainage area or watershed for which agency and public review has been conducted pursuant to the State Environmental Policy Act.

14. A public or private project that is designed to improve fish or wildlife habitat or fish passage, when all of the following apply:

a. The project has been approved in writing by the department of fish and wildlife;

b. The project has received hydraulic project approval by the department of fish and wildlife pursuant to chapter 77.55 RCW; and

c. The local government has determined that the project is substantially consistent with the local shoreline master program. The local government shall make such determination in a timely manner and provide it by letter to the project proponent.

15. The external or internal retrofitting of an existing structure with the exclusive purpose of compliance with the Americans with Disabilities Act of 1990 (42 U.S.C. Sec. 12101 et seq.) or to otherwise provide physical access to the structure by individuals with disabilities.
18.44.010 Purpose and Applicability
A. The purpose of this chapter is to implement the Shoreline Management Act of 1971, as amended and the rules and regulations thereunder as codified in the Washington Administrative Code; and to provide for the regulation of development which affect those areas of the City under the jurisdiction of the Shoreline Management Act. In particular, the purpose of this chapter is to:
1. Recognize and protect shorelines of State-wide significance;
2. Preserve the natural character of the shoreline;
3. Protect the resources and ecology of the shoreline;
4. Increase public access to publicly-owned areas of the shoreline;
5. Increase recreational opportunities for the public in the shoreline;
6. Protect and create critical Chinook salmon habitat in the Transition Zone of the Green River.
B. Applicability of Amended Zoning Code. After the effective date of this ordinance, Chapter 18.44 of the Zoning Code, as hereby amended, shall apply to all properties subject to the shoreline overlay, provided that nothing contained herein shall be deemed to override any vested rights or require any alteration of a non-conforming use or non-conforming structure, except as specifically provided in Chapter 18.44 of the Zoning Code, as amended.
C. Pursuant to WAC 173-26-151 (2)(c), this Chapter, together with the Shoreline Element of the Comprehensive Plan, constitutes the City of Tukwila’s Shoreline Master Program. Any modifications to these documents will be processed as a Shoreline Master Program Amendment and require approval by the Department of Ecology.

18.44.020 Shoreline Environment Designations
All shoreline within the City is designated “urban” and further identified as follows:
1. Shoreline Residential Environment. All lands zoned for residential use as measured 200 feet landward from the Ordinary High Water Mark (OHWM).
2. Urban Conservancy Environment. All lands not zoned for residential use upstream from the Turning Basin as measured 200 feet landward from the OHWM.
3. **High Intensity Environment.** All lands downstream from the Turning Basin as measured 200 feet landward from the OHWM.

4. **Aquatic Environment.** All water bodies within the City limits and its potential annexation areas under the jurisdiction of the Shoreline Management Act waterward of the Ordinary High Water Mark. The Aquatic Environment includes the water surface together with the underlying lands and the water column.

18.44.030 Principally Permitted Uses and Shoreline Use and Modification Matrix

A. TMC Section 18.44.030(A), including the Use Matrix (Figure 18-1), specifies the uses that are permitted outright, permitted as a Conditional Use or prohibited altogether for each Shoreline Environment. Also included are special conditions and general requirements controlling specific uses. These regulations are intended to implement the purpose of each Shoreline Environment designation.

B. In the matrix, shoreline environments are listed at the top of each column and the specific uses are listed along the left-hand side of each horizontal row. The cell at the intersection of a column and a row indicates whether a use may be allowed in a specific shoreline environment and whether additional use criteria apply. The matrix shall be interpreted as follows:

1. If the letter "P" appears in the box at the intersection of the column and the row, the use may be allowed within the shoreline environment if the underlying zoning also allows the use. Shoreline (SDP, CUP and Variance) permits may be required.

2. If the letter "C" appears in the box at the intersection of the column and the row, the use may be allowed within the shoreline environment subject to the shoreline conditional use review and approval procedures specified in TMC Section 18.44.130, C.

3. If the letter "X" appears in the box at the intersection of the column and the row, the use is prohibited in that shoreline environment.

C. In addition to the matrix the following general use requirements also apply to all development within the shoreline jurisdiction. Additional requirements controlling specific uses are set forth for each Shoreline Environment designation, to implement the purpose of the respective Shoreline Environment designations.

1. The first priority for City-owned property other than right-of-way within the shoreline jurisdiction shall be reserved for water-dependent uses including but not limited to habitat restoration, followed by water-enjoyment uses, public access, passive recreation, passive open space uses, or public educational purposes.

2. No hazardous waste handling, processing or storage is allowed within the SMA shoreline jurisdiction, unless incidental to a use allowed in the designated shoreline environment and adequate controls are in place to prevent any releases to the shoreline/water.

3. Overwater structures shall not cause a net loss of ecological function, interfere with navigation or flood management, or present potential hazards to downstream properties or facilities. They shall comply with the standards in the Overwater Structures Section of TMC Section 18.44.050(K).

4. Parking as a primary use is not permitted, except for existing Park and Ride lots, where adequate stormwater collection and treatment is in place to protect water quality. Parking is permitted only as an accessory to a permitted or conditional use in the shoreline jurisdiction.

5. All development, activities or uses, unless it is an approved overwater, flood management structure or shoreline restoration project, shall be prohibited waterward of the OHWM.

(Ord. 2346 §1, 2011)

---

**Notes:**

1. Additional permitted uses found at TMC 18.44.040 are allowed in the buffer.
2. Additional permitted uses found at TMC 18.44.050 are allowed in the buffer.
3. Additional permitted uses found at TMC 18.44.060 are allowed in the buffer.

---

1. Commercial uses mean those uses that are involved in wholesale, retail, service and business trade. Examples include office, restaurants, brew pubs, medical, dental and veterinary clinics, hotels, retail sales, hotel/motels, and warehousing.
2. Non-water-oriented uses may be allowed as a permitted use where the City determines that water-dependent or water-enjoyment use of the shoreline is not feasible due to the configuration of the shoreline and water body.
3. Permitted only if water-dependent.
4. Structures greater than 35 feet tall require a conditional use permit.
5. Permitted if located to the most upland portion of the property and adequately screened and/or landscaped in accordance with the Vegetation Protection and Landscaping section.
6. Outdoor storage within the shoreline buffer is only permitted in conjunction with a water-dependent use.
7. Conditionally allowed when in compliance with all federal and state regulations.
8. Maintenance dredging of established navigation channels and basins is restricted to maintaining previously dredged and/or existing authorized location, depth and width.
9. Conditionally allowed when significant ecological impacts are minimized and mitigation is provided.

---

*This matrix is a summary. Individual notes modify standards in this matrix. Detailed use standards are found in the text of this chapter. Permitted or conditional uses listed herein may also require a shoreline substantial development permit and other permits.*
10. Allowed in shoreline jurisdiction when it is demonstrated that there is no feasible alternative to locating the use within shoreline jurisdiction.

11. The maximum height of the fence along the shoreline shall not exceed four feet in residential areas or six feet in commercial areas where there is a demonstrated need to ensure public safety and security of property. The fence shall not extend waterward beyond the top of the bank. Chain-link fences must be vinyl coated.

12. The fence shall not extend waterward beyond the top of the bank. Chain-link fences must be vinyl coated.

13. The maximum height of the fence along the shoreline shall not exceed four feet in residential areas or six feet in commercial areas where there is a demonstrated need to ensure public safety and security of property.

14. Any new or redeveloped levee shall meet the applicable levee requirements of this chapter.

15. Permitted when consistent with TMC Section 18.44.050 E.

16. Industrial uses mean those uses for manufacturing, processing, assembling and/or storing of finished or semi-finished goods with support from office and commercial uses. Examples include but are not limited to manufacturing processing and/or assembling such items as electrical or mechanical equipment, previously manufactured metals, chemicals, light metals, plastics, solvents, paper, wood, machines, food, pharmaceuticals, previously prepared materials, warehousing and wholesale distribution, sales and rental of heavy machinery and equipment and internet data centers.

17. Subject to compliance with state siting criteria found in Chapter 70.105d RCW (See also Environmental Regulations, TMC Section 18.44.050).

18. Permitted when associated with water-dependent uses, public access, recreation, flood control or channel management.

19. Permitted when the applicant has demonstrated a need for moorage and that the following alternatives have been investigated and are not available or feasible:
   a. commercial or marina moorage;
   b. floating moorage buoys;
   c. joint use moorage piers.

20. Permitted if associated with water-dependent uses, public access, recreation, flood control, channel management or ecological restoration.

21. Boats may only be moored at a dock or marina. No boats may be moored on tidelands or in the river channel.

22. Limited to athletic or health clubs.

23. Recreation furniture and structures such as benches, tables, viewpoints, and picnic shelters are permitted in the buffer provided no such structure shall block views to the shoreline from adjacent properties.

24. Permitted only if water-oriented.

25. Parks, recreation and open space facilities open to the public and operated by public agencies and non-profit organizations are permitted.

26. Plaza connectors between buildings and levees, not exceeding the height of the levee, are permitted for the purpose of providing and enhancing pedestrian access along the river and for landscaping purposes.

27. Additional development may be allowed consistent with TMC Section 18.44.110. G. 2. f. A shoreline conditional use permit is required for water-oriented accessory structures that exceed the height limits of the Shoreline Residential environment.

28. Permitted in the Aquatic Environment and subject to the criteria in TMC Section 18.44.050.

29. Patios and decks are permitted within the shoreline buffer so long as they do not exceed 18 inches in height, are limited to a maximum of 200 square feet and 50% of the width of the river frontage. Decks or patios must be located landward of the top of the bank and be constructed to be pervious and of environmentally-friendly materials.

30. Permitted when consistent with TMC Section 18.44.050 L.

31. Permitted only if connecting public rights-of-way.
32. May be co-located with fire lanes or parking areas.
33. Allowed if they require a physical connection to the shoreline to provide their support function, providing they are located at or below grade and as far from the OHWM as technically feasible.
34. Regional detention facilities that meet the City’s Infrastructure Design and Construction Standards along with their supporting elements such as ponds, piping, fiber systems and outfalls exist as of the effective date of this program or are feasible alternative location exists. Any regional detention facility located in the buffer shall be designed such that a fence is not required, planted with native vegetation, designed to blend with the surrounding environment, and provide design features that serve both public and private uses, such as an access road that can also serve as a trail. The facility shall be designed to locate access roads and other impervious surfaces as far from the river as practical.

4. Commercial uses mean those uses that are involved in wholesale, retail, service and business trade. Examples include offices, restaurants, bars, pubs, medical, dental and veterinary clinics, hotels, retail sales, hotels/motels, and warehousing.

5. Permitted only if water dependent.

6. Subject to compliance with state siting criteria RCW Chapter 70.105 (See also Environmental Regulations, TMC 18.44.060).

7. Industrial uses mean those uses that are facilities for manufacturing, processing, assembling and/or storing of finished or semi-finished goods with supportive office and commercial uses. Examples include manufacturing, processing, and/or assembling such items as electrical or mechanical equipment, previously manufactured metals, chemicals, light metals, plastics, solvents, wood, machines, food, pharmaceuticals, previously prepared materials, warehousing, and wholesale distribution. Sales and rental of heavy machinery and equipment, and internet data centers.

8. Non-water oriented uses may be allowed as a permitted use where the City determines that water dependent or water enjoyment use of the shoreline is not feasible due to the configuration of the shoreline and water body.

9. Allowed in shoreline jurisdiction when it is demonstrated that there is no feasible alternative to locating the use within shoreline jurisdiction.

10. Additional development may be allowed consistent with TMC 18.44.130 E. 2. f. A shoreline conditional use permit is required for water oriented accessory structures that exceed the height limits of the Shoreline Residential Environment.

11. Limited to athletic or health clubs.

12. Permitted only if water oriented.

18.44.040 Shoreline Buffers

A. Buffer widths. The following river buffer widths apply in shoreline jurisdiction.

<table>
<thead>
<tr>
<th>Environment</th>
<th>Buffer width (1)(2)</th>
<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shoreline Residential</td>
<td>50 feet OR the area needed to achieve a slope no steeper than 2.5:1 measured from the toe of the bank to the top of the bank, if so measured from the toe of the berms or, if so measured from the toe of the berms, the area nearest the water edge and as narrow as feasible. (3)</td>
<td></td>
</tr>
<tr>
<td>Urban Areas without</td>
<td>100 feet</td>
<td>(4)</td>
</tr>
<tr>
<td>Conservancy</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Commented [NG10]: The buffer distances and modifications that were previously included in the above section have been consolidated into a table.
1. Unless otherwise noted, all buffers are measured landward from the OHWM.

2. In any shoreline environment where an existing improved street or road runs parallel to the river through the buffer, the buffer ends on the river side of the improved right-of-way.

3. Removal of invasive species and replanting with native species of high habitat value is voluntary unless triggered by requirement for a Shoreline Substantial Development permit.

4. The Director may reduce the standard buffer on a case-by-case basis by up to 50% upon construction of the following cross section:
   a. Reslope bank from toe to be no steeper than 2.5:1 in the Urban Conservancy Environment or reslope bank from OHWM (not toe) to be no steeper than 3:1 in the High Intensity Environment using bioengineering techniques.
   b. Minimum 20' buffer landward from top of bank.
   c. Bank and remaining buffer to be planted with native species with high habitat value.

   Maximum slope is reduced due to measurement from OHWM and to recognize location in the Transition Zone where pronounced tidal influence makes work below OHWM difficult.

   Any buffer reduction proposal must demonstrate to the satisfaction of the Director that it will not result in direct, indirect or long-term adverse impacts to the river. In all cases, a buffer enhancement plan must also be approved and implemented as a condition of the reduction. The plan must include the use of a variety of native vegetation that improves the functional attributes of the buffer and provides additional protection for the shoreline ecological functions.

5. Upon reconstruction of a levee to the levee standards of this chapter, the Director may reduce the buffer to actual width required for the levee. If fill is placed along the back slope of a new levee, the buffer may be reduced to the point where the ground plane intersects the back slope of the levee. If the property owner provides a 15-foot levee maintenance easement landward from the landward toe of the levee or levee wall which:
   1) meets the width required by the agency providing maintenance;
   2) prohibits the construction of any structures; and
   3) allows the City to access the area to inspect the levee and make any necessary repairs; then that area may be outside of the shoreline buffer and allow incidental uses such as parking.

18.44.040 Shoreline Residential Environment Uses

A. Shoreline Residential Buffer Delineated Uses. The Shoreline Residential River Buffer shall consist of the area needed to achieve a 2.5:1 slope of the river bank, measured from the toe of the bank to the top of the bank, plus 20 linear feet measured from the top of the bank landward; provided, that in no case shall the Shoreline Residential Buffer be less than 50 feet landward of the OHWM.

1. Permitted Uses. No uses or structures are permitted in the Shoreline Residential Buffer except for the following:
   a. Shoreline restoration projects.
   b. Over-water structures subject to the standards in the Over Water Structures Section associated with water-dependent uses, public access, recreation, flood control or channel management. Private, single-residence piers for the sole use of the property owner shall not be considered an outright use on the shoreline. A dock may be allowed when the applicant has demonstrated a need for moorage and that the following alternatives have been investigated and are not available or feasible:
      1) commercial or marina moorage;
      2) floating moorage buoys.
(3) joint use moorage pier/dock.

c. Public parks, recreation and open space.
d. Public pedestrian bridges.
e. Public and/or private promenades, footpaths or trails.
f. Recreation structures such as benches, tables, viewpoints, and picnic shelters, provided no such structure shall exceed 15 feet in height or 25 square feet in area or block views to the shoreline from adjacent properties.
g. Signs conforming to the development standards of this chapter.
h. Construction, maintenance or re-development of levees for flood control purposes, provided that any new or redeveloped levee shall meet the applicable levee requirements of this chapter.
i. Vehicle bridges, only if connecting public rights of way.
j. Utility towers and utilities, except the provision, distribution, collection, transmission or disposal of refuse.
k. Fire lanes when co-located with levee maintenance roads.
l. New shoreline stabilization utilizing the development standards in TMC Section 18.44.070(F).
m. Water dependent uses and their structures, as long as there is no net loss of shoreline ecological function.
n. Fences, provided the maximum height of a fence along the shoreline is four feet and the fence does not extend waterward beyond the top of the bank. Chain link fences must be vinyl coated.
o. Existing essential streets, roads and rights of way may be maintained or improved.
p. Outdoor storage, only in conjunction with a water dependent use.
q. Water oriented essential public facilities, both above and below ground.
r. Non-water oriented essential public facilities, both above and below ground, provided it has been documented that no feasible location is available outside of the buffer.
s. Landfill as part of an approved remediation plan for the purpose of capping contaminated sediments.
t. Patios or decks not exceeding 18 inches in height, limited to a maximum 200 square feet and 50% of the width of the river frontage. Decks or patios must be located landward of the top of the bank and be constructed to be pervious and of environmentally friendly materials. If a deck or patio will have an environmental impact in the shoreline buffer, then commensurate mitigation shall be required.
u. Support facilities for above or below ground utilities or pollution control, such as outfall facilities or other facilities that must have a physical connection to the shoreline to provide their support function, provided they are located at or below grade and as far from the OHWM as technically feasible.

2. Conditional Uses. Only the following may be allowed as a Conditional Use in the Shoreline Residential River Buffer subject to the requirements, procedures and conditions established by TMC Chapter 18.64 and shall be reviewed through a Shoreline Conditional Use Permit:

a. Dredging activities when in compliance with all federal and state regulations, when necessary for navigation or remediation of contaminated sediments.
b. Dredging for navigational purposes is permitted where necessary for assuring safe and efficient accommodation of existing navigational uses and then only when significant ecological impacts are minimized and when mitigation is provided. Maintenance dredging of established navigation channels and basins is restricted to maintaining previously dredged and/or existing authorized location, depth and width. Dredging of bottom materials for the purpose of obtaining fill material is prohibited.
c. New private vehicle bridges.
d. Fill minimally necessary to support water-dependent uses, public access, or for the alteration or expansion of a transportation facility of statewide significance currently located on the shoreline when it is demonstrated that alternatives to fill are not feasible.
e. Bridges, approved above ground utility structures, and water-dependent uses and their structures greater than 35 feet in height.

Commented [CL13]: The height and size requirement has been an issue for some of the recreation uses in the shoreline buffer - informational kiosk at Duwamish Hill. In hindsight, I think 15 ft. and 25 sq. ft. are too stringent.

Commented [NG14R13]: Note 23 in the use matrix removes these size restrictions.
B. Shoreline Residential Environment Outside of Buffer Permitted Uses. The following uses are permitted within the Shoreline Residential Environment outside of the Shoreline Residential River Buffer. Uses shall meet the purposes and criteria of the Shoreline Environment Designation section.

1. Permitted Uses. The Shoreline Residential Environment shall contain residential, recreational and limited commercial uses and accessory uses as allowed in the underlying zoning district. In addition, the Shoreline Residential Environment shall allow the following uses:
   a. All uses permitted in the Shoreline Residential River Buffer.
   b. For non-residential uses, parking/loading and storage facilities located to the most upland portion of the property and adequately screened and landscaped in accordance with the Vegetation Protection and Landscaping section.
   c. Railroad tracks.
   d. Public or private roads.

2. Conditional Uses. All uses listed as Conditional Uses in the underlying zone may be allowed subject to the requirements, procedures and conditions established by TMC Chapter 18.64. A Shoreline Conditional Use Permit is required.

18.44.050 Urban Conservancy Environment Uses

A. Urban Conservancy Environment Buffer Delineated. The Urban Conservancy Environment Buffer shall consist of that area measured 100 feet landward of the OHWM for non-leved portions of the river, and that area measured 125 feet landward from the OHWM for leved portions of the river.

B. Urban Conservancy Environment Buffer Uses.

1. Permitted Uses. The following uses are permitted in the Urban Conservancy River Buffer:
   a. Shoreline restoration projects.
   b. Over water structures subject to the standards established in the Over water Structures Section, TMC Section 18.44.070(K), that are associated with water dependent uses, public access, recreation, flood control, channel management or ecological restoration.
   c. Public parks, recreation and open space.
   d. Public and/or private promenades, footpaths or trails.
   e. Public pedestrian bridges.
   f. Recreation structures such as benches, tables, viewpoints, and picnic shelters, provided no such structure shall exceed 15 feet in height and 25 square feet in area and views of the shoreline are not blocked from adjacent properties.
   g. Signs conforming to the development standards of this chapter.
   h. Construction, maintenance or re-development of levees for flood control purposes, provided that any new or re-developed levee shall meet the applicable levee requirements of this chapter.
   i. New vehicle bridges: permitted only if connecting public rights-of-way; existing public or private vehicle bridges may be maintained or replaced.
   j. Utility towers and utilities, except the provision, distribution, collection, transmission or disposal of refuse.
   k. levee maintenance roads.
   l. Plaza connectors between buildings and levees, not exceeding the height of the levee, are permitted for the purpose of providing and enhancing pedestrian access along the river and for landscaping purposes.
   m. New shoreline stabilization utilizing the development standards in the Shoreline Stabilization Section, TMC Section 18.44.070(F).
   n. Existing essential streets, roads and rights-of-way may be maintained or improved.
   o. Water dependent commercial and industrial development if permitted by the underlying zoning district.

Commented [CL15]: Same explanation as under residential buffer.
p. Support facilities for above or below ground utilities or pollution control, such as outfall facilities or other facilities that must have a physical connection to the shoreline to provide their support function, provided they are located at or below grade and as far from the OHWM as technically feasible.

q. Outdoor storage, only in conjunction with a water dependent use.

r. Water oriented essential public facilities, both above and below ground, provided it has been documented that no feasible location is available outside of the buffer.

s. Non water oriented essential public facilities, both above and below ground, provided it has been documented that no feasible location is available outside of the buffer.

1. Landfill as part of an approved remediation plan for the purpose of capping contaminated sediments.

u. Regional detention facilities that meet the City’s Infrastructure Design and Construction Standards along with their supporting elements such as ponds, piping, filter systems and outfalls vested as of the effective date of this program or if no feasible alternative location exists. Any regional detention facility located in the buffer shall be designed such that a fence is not required, planted with native vegetation, designed to blend with the surrounding environment, and provide design features that serve both public and private use, such as an access road that can also serve as a trail. The facility shall be designed to locate access roads and other impervious surfaces as far from the river as practical.

2. Conditional Uses. Only the following may be allowed as a Conditional Use in the Shoreline Urban Conservation Environment Buffer, subject to the requirements, procedures and conditions established by TMC Chapter 18.64 and shall be reviewed through a Shoreline Conditional Use Permit:

a. Dredging activities where necessary for assuring safe and efficient accommodation of existing navigational uses and then only when significant ecological impacts are minimized and when mitigation is provided. Dredging for remediation of contaminated sediments when mitigation is provided. Dredging of bottom materials for the purpose of obtaining fill material is prohibited. Dredging activities must comply with all federal and state regulations.

c. New private vehicle bridges.

d. Fill minimally necessary to support water dependent uses, public access, or for the alteration or expansion of a transportation facility of statewide significance currently located on the shoreline when it is demonstrated that alternatives to fill are not feasible.

C. Urban Conservancy Environment Outside of Buffer Uses. The following uses are permitted in the Urban Conservancy Environment, outside of the Urban Conservancy Environment Buffer. Uses shall meet the purposes and criteria of the Urban Conservancy Environment as established in the Shoreline Environment Designation section.

1. Permitted Uses. All uses permitted in the Urban Conservancy Environment Buffer and/or the Shoreline Use Matrix may be allowed.

2. Conditional Uses. All uses listed as Conditional Uses in the underlying zone may be allowed subject to the requirements, procedures and conditions established by TMC Chapter 18.64. A Shoreline Conditional Use Permit shall be required.

D. Urban Conservancy Buffer Width Reduction. The Director may reduce the Urban Conservancy Environment Buffer as follows:

1. For property located within the 100 foot buffer in non levee portions of the river, the Urban Conservancy Environment Buffer may be reduced to that area occupied by the river bank plus 20 feet measured landward from the top of the bank; provided however, that the applicant must first re slope the river bank to 2.5:1, provide a 20 foot setback from the top of the new slope and vegetate both the river bank and the 20 foot setback area in accordance with the standards in TMC Section 18.44.080, and provided that the Director determines that any buffer reduction will not result in direct, indirect or long term adverse impacts to shoreline ecosystem functions. Further, a buffer enhancement plan, including removal of invasive plants and plantings using a variety of native vegetation that improves the functional attributes of the buffer and provides additional protection for the watercourse functions, must be approved by the Director and implemented by the applicant as a condition of the reduction. In no case shall the reduced buffer be less than 50 feet.

Commented [RL16]: The KCFCD is implementing 500-year level of flood protection. This may require that future levees are constructed within areas that are not currently protected by a levee.

Commented [MP17]: The WRIA 9 Re-green the Green - Riparian Revegetation strategy states that tall trees along a 165-foot wide swath next to the river will have the most habitat/shade benefits.
2. For property located within the 125 foot buffer along leveed portions of the river, the Urban Conservancy Environment Buffer may be reduced to that area occupied by levee or river bank improvements meeting the minimum levee profile or other levee standards provided in this chapter, plus 10 feet measured landward from the landward toe of the levee or (if permitted by this chapter) floodwall. In the event that the owner provides the City with a 10 foot levee maintenance easement, measured landward from the landward toe of the levee or levee wall and prohibiting the construction of any structures and allows the City to access the area to inspect the levee, then the buffer shall be reduced to the landward toe of the levee, or landward edge of the levee floodwall, as the case may be.

3. Fill is placed along the back slope of a new levee, the Urban Conservancy Environment Buffer may be reduced to the point where the ground plane intersects the back slope of the levee, provided that the property owner must grant the City a levee maintenance easement measured 10 feet landward from the landward toe of the levee or levee wall, and which easement prohibits the construction of any structures and allows the City to access the area to inspect the levee and/or wall and make any necessary repairs. (Ord. 2346 §4, 2011)

18.44.060 High Intensity Environment Uses

A. High Intensity Environment Buffer - Delineated. The High Intensity Environment Buffer shall consist of an area measured 100 feet landward from the OHWM. The remaining area of shoreline jurisdiction is non buffer area.

B. High Intensity Environment Buffer Uses.

1. Permitted Uses. The following uses are permitted in the High Intensity River Buffer:
   a. Shoreline restoration projects.
   b. Over water structures subject to the standards established in the Over water Structures Section that are associated with water dependent uses, public access, recreation, flood control, channel management or ecological restoration.
   c. Public parks, recreation and open space.
   d. Public and/or private promenades, footpaths or trails.
   e. Public pedestrian bridges.
   f. Recreation structures such as benches, tables, viewpoints, and picnic shelters, provided no such structure shall exceed 15 feet in height and 25 square feet in area and no views of the shoreline are blocked from adjacent properties.
   g. Signs conforming to the development standards of this chapter.
   h. Construction, maintenance or re-development of levees for flood control purposes, provided that any new or redeveloped levee shall meet the applicable levee requirements of this chapter.
   i. New vehicle bridges permitted only if connecting public rights of way; existing public or private vehicle bridges may be maintained or replaced.
   j. Utility towers and  utilities, except the provision, distribution, collection, transmission or disposal of refuse.
   k. Levee maintenance roads.
   l. Plaza connectors between buildings and levees, not exceeding the height of the levee, are permitted for the purpose of providing and enhancing pedestrian access along the river and for landscaping purposes.
   m. New shoreline stabilization utilizing the development standards in the Shoreline Stabilization Section, TMC Section 18.44.070(F).
   n. Existing essential streets, roads and rights of way may be maintained or improved.
   o. Water dependent commercial and industrial development, if permitted by the underlying zoning district.
   p. Support facilities for above or below ground utilities or pollution control, such as outfall facilities or other facilities that must have a physical connection to the shoreline to provide their support function, provided they are located at or below grade and as far from the OHWM as technically feasible.
   q. Outdoor storage, only in conjunction with a water dependent use.

Commented [CL18]: I think we should reconsider the hard and fast levee profile that was adopted in the SMP – the profile we approved for the Kent repair was actually better in some ways than our adopted profile. However it required a shoreline variance because it did not meet the exact design of the minimum levee profile.

Commented [CL19]: See explanation above

Commented [CL20]: See explanation under residential buffer.
Water oriented essential public facilities, both above and below ground.

Non water oriented essential public facilities, both above and below ground, provided it has been documented that no feasible location is available outside of the buffer.

Landfill as part of an approved remediation plan for the purpose of capping contaminated sediments.

Regional detention facilities that meet the City's Infrastructure Design and Construction Standards along with their supporting elements such as ponds, piping, filter systems and outfalls vested as of the effective date of this program or if no feasible alternative location exists. Any regional detention facility located in the buffer shall be designed such that a fence is not required, planted with native vegetation, designed to blend with the surrounding environment, and provide design features that serve both public and private use such as an access road that can also serve as a trail. The facility shall be designed to locate access roads and other impervious surfaces as far from the river as practical.

2. Conditional Uses. Only the following may be allowed as a Conditional Use in the Shoreline High Intensity Environment Buffer subject to the requirements, procedures and conditions established by TMC Chapter 18.64. A Shoreline Conditional Use Permit shall be required.

a. Dredging activities where necessary for assuring safe and efficient accommodation of existing navigational uses and then only when significant ecological impacts are minimized and when mitigation is provided.

b. Dredging for remediation of contaminated sediments when mitigation is provided. Dredging of bottom materials for the purpose of obtaining fill material is prohibited. Dredging activities must comply with all federal and state regulations.

c. New private vehicle bridges.

d. Fill minimally necessary to support water dependent uses, public access, or for the alteration or expansion of a transportation facility of statewide significance currently located on the shoreline when it is demonstrated that alternatives to fill are not feasible.

C. Shoreline Urban High Intensity Environment Uses. The Shoreline Urban High Intensity Environment shall consist of the remaining area within the 200 foot Shoreline Jurisdiction that is not within the Shoreline High Intensity Environment Buffer area. Uses shall meet the purposes and criteria of the Shoreline Environment Designations section.

1. Permitted Uses. All uses permitted in the High Intensity Environment Buffer and/or the Shoreline Use Matrix may be allowed.

2. Conditional Uses. All uses listed as Conditional Uses in the underlying zone may be allowed subject to the requirements, procedures and conditions established by TMC Chapter 18.64. A Shoreline Conditional Use Permit shall be required.

D. Shoreline High Intensity Environment Buffer Reduction. The Director may reduce the High Intensity Environment Buffer where the applicant re slopes the river bank to be no steeper than 3:1 above the OHWM, provides a 20 foot setback from the top of the new slope, vegetates both the river bank and the 20 foot setback area in accordance with the standards in the Vegetation Protection and Landscaping Section, and the Director determines there will be no net loss of shoreline ecological functions. In no case shall the reduced buffer be less than 50 feet. On properties where the bank slope currently is no steeper than 3:1 or where the property owner has already re sloped the river bank, provided a 20 foot setback and vegetated the bank and setback as provided in this chapter, the buffer width will be the distance measured from the OHWM to the top of the bank, plus 20 feet.

(Ord. 2346 §5, 2011)

18.44.065 Aquatic Environment Uses

A. Aquatic Environment Delineated. The Aquatic Environment consists of all water bodies within the City, its limits and its potential annexation areas under the jurisdiction of the Shoreline Management Act waterward of the Ordinary High Water Mark. The Aquatic Environment includes the water surface together with the underlying lands and the water column.
B. Permitted Uses. The following uses are permitted in the Aquatic Environment. Uses and activities within the Aquatic Environment must be compatible with the adjoining shoreline environment:

1. Shoreline restoration projects.
2. Over water structures subject to the standards established in the Over water Structures Section that are associated with water dependent uses, public access, recreation, flood control, channel management or ecological restoration.
3. Maintenance or redevelopment of levees for flood control purposes, provided that any redevelopment of a levee shall meet the applicable levee regulations of this chapter.
4. New shoreline stabilization utilizing the development standards in the Shoreline Stabilization Section.
5. Water dependent commercial and industrial development, if permitted by the underlying zoning district.
6. Boats moored at a dock or marina. No boats may be moored on tidelands or in the river channel.
7. Fill for ecological restoration.

C. Conditional Uses. Only the following may be allowed as a Conditional Use in the Shoreline Aquatic Environment Buffer subject to the requirements, procedures and conditions established by this program:

1. Dredging activities where necessary for assuring safe and efficient accommodation of existing navigational uses and then only when significant ecological impacts are minimized and when mitigation is provided.
2. Dredging for remediation of contaminated sediments when mitigation is provided. Dredging of bottom materials for the purpose of obtaining fill material is prohibited. Dredging activities must comply with all federal and state regulations.
3. Fill minimally necessary to support water dependent uses, public access, or for the alteration or expansion of a transportation facility of statewide significance currently located on the shoreline when it is demonstrated that alternatives to fill are not feasible.

(Ord. 2346 §6, 2011)

18.44.050 Development Standards

A. Applicability. The development standards of this chapter apply to work that meets the definition of substantial development except for vegetation removal per TMC Section 18.44.060, which applies to all shoreline development. The term “substantial development” applies to non-conforming, new or re-development. Non-conforming uses, structures, parking lots and landscape areas, will be governed by the standards in TMC Section 18.44.110(E), “Non-Conforming Development.”

B. Shoreline Residential Development Standards. A shoreline substantial development permit is not required for construction within the Shoreline Residential Environment by an owner, lessee or contract purchaser of a single family residence for his/her own use or for the use of a family member. Such construction and all normal appurtenant structures must otherwise conform to this chapter. Short subdivisions and subdivisions are not exempt from obtaining a Shoreline Substantial Development Permit.

1. Shoreline Residential Environment Standards. The following standards apply to the Shoreline Residential Environment:
   a. The development standards of the applicable underlying zoning district (Title 18, Tukwila Municipal Code) shall apply.
   b. New development and uses must be sited so as to allow natural bank inclination of 2.5:1 slope with a 20-foot setback from the top of the bank. The Director may require a riverbank analysis as part of any development proposal.
   c. Utilities such as pumps, pipes, etc., shall be suitably screened with native vegetation per the standards in the Vegetation Protection and Landscaping Section.
   d. New shoreline stabilization, repair of existing stabilization or modifications to the river bank must comply with the standards in the Shoreline Stabilization Section, TMC Section 18.44.050(F).
e. Short plats of five to nine lots or formal subdivisions must be designed to provide public access to the river in accordance with the Public Access Section, TMC Section 18.44. (2200). Signage is required to identify the public access point(s).
f. Parking facilities associated with single family residential development or public recreational facilities are subject to the specific performance standards set forth in the Off-Site Parking Section, TMC Section 18.44. (2205).
g. Fences, freestanding walls or other structures normally accessory to residences must not block views of the river from adjacent residences or extend waterward beyond the top of the bank. Chain link fencing must be vinyl coated.
h. Recreational structures permitted in the buffer must provide buffer mitigation.
i. The outside edge of surface transportation facilities, such as railroad tracks, streets, or public transit shall be located no closer than 50 feet from the OHWM, except where the surface transportation facility is bridging the river.
j. Except for bridges, approved above ground utility structures, and water-dependent uses and their structures, the maximum height for structures shall be 30 feet. For bridges, approved above ground utility structures, and water-dependent uses and their structures, the height limit shall be as demonstrated necessary to accomplish the structure’s primary purpose. Bridges, approved above ground utility structures, and water-dependent uses and their structures greater than 30 feet in height require approval of a Shoreline Conditional Use Permit.

2. Design Review:
   Design review is required for non-residential development in the Shoreline Residential Environment.

C. High Intensity, Urban Conservancy and Aquatic Environment Development Standards.

1. Standards. The following standards apply in the High Intensity, Urban Conservancy and Aquatic Environments.

   a. The development standards for the applicable underlying zoning district (Title 18, Tukwila Municipal Code) shall apply.

   b. All new development performed by public agencies, or new multi-family, commercial, or industrial development shall provide public access in accordance with the standards in the Public Access Section.

   c. Development or re-development of properties in areas of the shoreline armored with revetments or other hard armoring other than levees, or with non-armored river banks, must comply with the Vegetation Protection and Landscaping Section, TMC Section 18.44. (2205).

   d. Any new shoreline stabilization or repairs to existing stabilization must comply with Shoreline Stabilization Section, TMC Section 18.44. (2240).

   e. Over-water structures shall be allowed only for water-dependent uses and the size limited to the minimum necessary to support the structur’s intended use and shall result in no net loss to shoreline ecological function. Over-water structures must comply with the standards in the Over-water Structures Section, TMC Section 18.44. (2205).

2. Setbacks and Site Configuration:

   a. The yard setback adjacent to the river is the buffer width established for the applicable shoreline environment.

   b. A fishing pier, viewing platform or other outdoor feature that provides access to the shoreline is not required to meet a setback from the OHWM.

3. Height Restrictions. Except for bridges, approved above ground utility structures, and water-dependent uses and their structures, to preserve visual access to the shoreline and avoid massing of tall buildings within the shoreline jurisdiction, the maximum height for structures shall be as follows:

   a. 15 feet where located within the River Buffer.

   b. Provided, no permit shall be issued for any new or expanded building or structure of more than 35 feet above average grade level on shorelines of the State that will obstruct the view of a substantial number of water-dependent uses and the size limited to the minimum necessary to support the structure’s intended use and shall result in no net loss to shoreline ecological function. Over-water structures must comply with the standards in the Over-water Structures Section, TMC Section 18.44. (2205).

Commented [NG21]: This is part of the current code and the intent was to step development down toward the water. In some cases, that has led developers to put buildings adjacent to the river buffer so that their buildings were outside of shoreline jurisdiction and not subject to the height restriction.
of residences on areas adjoining such shorelines. For any building that is proposed to be greater than 35 feet in height in the shoreline jurisdiction, the development proponent must demonstrate the proposed building will not block the views of a substantial number of residences.

- **a.** The Director may approve a 15% increase in height for structures within the jurisdiction if the project proponent provides evidence of restoration and/or enhancement of the entire shoreline buffer beyond what may otherwise be required, including but not limited to, paved areas not in use on the property. In accordance with the standards of TMC, Section 18.44.060, "Vegetation Protection and Landscaping," if the required buffer has already been restored, the project proponent may provide a 20% wider buffer, planted in accordance with TMC, Section 18.44.060, "Vegetation Protection and Landscaping," in order to obtain the 15% increase in height in accordance with TMC, Section 18.44.060, "Vegetation Protection and Landscaping."

- **b.** Incentives may not be used to increase building height above that permitted in the underlying zoning district.

4. **Lighting.** In addition to the lighting standards in TMC Chapter 18.60, "Board of Architectural Review," lighting for the site or development shall be designed and located so that:

   a. The minimum light levels in parking areas and paths between the building and street shall be one-foot candle.

   b. Lighting shall be designed to prevent light spillover and glare on adjacent properties and on the river channel. To the maximum extent feasible, be directed downward so as to illuminate only the immediate area, and be shielded to eliminate direct off-site illumination.

   c. The general grounds need not be lighted.

   d. The lighting is incorporated into a unified landscape and/or site plan.

D. **Surface Water and Water Quality.** The following standards apply to all shoreline development:

1. New surface water systems may not discharge directly into the river or streams tributary to the river without pre-treatment to reduce pollutants and meet State water quality standards.

2. Such pre-treatment may consist of biofiltration, oil/water separators, or other methods approved by the City of Tukwila Public Works Department.

3. Shoreline development, uses and activities shall not cause any increase in surface runoff, and shall have adequate provisions for storm water detention/infiltration.

4. Stormwater outfalls must be designed so as to cause no net loss of shoreline ecological functions or adverse impacts where functions are impaired. New stormwater outfalls or maintenance of existing outfalls must include shoreline restoration as part of the project.

5. Shoreline development and activities shall have adequate provisions for sanitary sewer.

6. Solid and liquid wastes and untreated effluents shall not be allowed to enter any bodies of water or to be discharged onto shorelands.

7. The use of low impact development techniques is required, unless such techniques conflict with other provisions of the SMP or are shown to not be feasible due to site conditions.

E. **Flood Hazard Reduction.** The following standards apply to all shoreline development:

1. New structural flood hazard reduction structures shall be allowed only when it can be demonstrated by a Riverbank Analysis that:

   a. They are necessary to protect existing development;

   b. Non-structural measures are not feasible; and

   c. Impacts to ecological functions and priority species and habitats can be successfully mitigated so as to assure no net loss.

2. Flood hazard structures must incorporate appropriate vegetation restoration and conservation actions consistent with the standards of the Vegetation Protection and Landscaping Section.

3. Levees, berms and similar flood control structures, whether new or redevelopment, shall be designed to meet the minimum levee profile, except as provided in Section 18.44.070.E.10 below.

4. Publicly-funded structural measures to reduce flood hazards shall improve public access or dedicate and provide public access unless public access improvements would cause unavoidable health or...
safety hazards to the public, inherent and unavoidable security problems, or significant ecological impacts that cannot be mitigated.

45. Rehabilitation or replacement of existing flood control structures, such as levees, with a primary purpose of containing the 1% to 0.02% annual chance flood event, shall be allowed where it can be demonstrated by an engineering analysis that the existing structure:
   a. Does not provide an appropriate level of protection for surrounding lands;
   b. Does not meet the minimum levee profile (2.5:1 riverside slope) or other appropriate engineering design standards for stability (e.g., over-steepened side slopes for existing soil and/or flow conditions); and
   c. Repair of the existing structure will not cause or increase significant adverse ecological impacts to the shoreline.

56. Rehabilitated or replaced flood hazard reduction structures shall not extend the toe of slope any further watershed than the existing structure.

57. New structural flood hazard reduction measures, such as levees, berms and similar flood control structures shall be placed landward of the floodway as determined by the best information available.

78. New, redeveloped or replaced structural flood hazard reduction measures shall be placed landward of associated wetlands, and designated fish and wildlife habitat conservation areas.

69. No commercial, industrial, office or residential development shall be located within a floodplain without a Flood Control Zone Permit issued by the City. No development shall be located within a floodway except as otherwise permitted.

910. New, redeveloped or replaced flood hazard reduction structures may deviate from the minimum levee profile only as follows must have an overall waterward slope no steeper than 2.5:1 unless it is not physically possible to achieve such a slope. A floodwall may be substituted for all or a portion of a levee back slope only where necessary to avoid encroachment or damage to a structure legally constructed prior to the date of adoption of this subsection, and which structure has not lost its nonconforming status or to allow area for waterward habitat restoration development. The floodwall shall be designed to be the minimum necessary to provide 100 feet of clearance between the levee and the building, or the minimum necessary to preserve access needed for building functionality while meeting all engineering safety standards. A floodwall may also be used where necessary to prevent the levee from encroaching upon a railroad easement recorded prior to the date of adoption of this subsection. If a floodwall is permitted under this subsection the levee slope must be 2.5H:1V unless it is not physically possible to achieve such a slope. In that instance, the levee slope must be as close to 2.5H:1V as physically possible.

F. Shoreline Stabilization. The provisions of this section apply to those structures or actions intended to minimize or prevent erosion of adjacent uplands and/or failure of riverbanks resulting from waves, tidal fluctuations or river currents. Shoreline stabilization or armoring involves the placement of erosion resistant materials (e.g., large rocks and boulders, cement, pilings and/or large woody debris (LWD)) or the use of bioengineering techniques to reduce or eliminate erosion of shorelines and risk to human infrastructure. This form of shoreline stabilization is distinct from flood control structures and flood hazard reduction measures (such as levees). The terms “shoreline stabilization,” “shoreline protection” and “shoreline armoring” are used interchangeably.

1. Shoreline protection shall not be considered an outright permitted use and shall be permitted only when it has been demonstrated through a riverbank analysis and report that shoreline protection is necessary for the protection of existing legally established structures and public improvements.
2. New development and re-development shall be designed and configured on the lot to avoid the need for new shoreline stabilization. Removal of failing shoreline stabilization shall be incorporated into re-development design proposals wherever feasible.
3. Replacement of lawfully established, existing bulkheads or revetments are subject to the following priority system:
   a. The first priority for replacement of bulkheads or revetments shall be landward of the existing bulkhead.
b. The second priority for replacement of existing bulkheads or revetments shall be to replace in place (at the bulkhead’s existing location).

4. When evaluating a proposal against the above priority system, at a minimum the following criteria shall be considered:
   a. Existing topography;
   b. Existing development;
   c. Location of abutting bulkheads;
   d. Impact to shoreline ecological functions; and,
   e. Impact to river hydraulics, potential changes in geomorphology, and to other areas of the shoreline.

5. Proponents of new or replacement hard shoreline stabilization (e.g. bulkheads or revetments) must demonstrate through a documented river bank analysis that bioengineered shoreline protection measures or bioengineering erosion control designs will not provide adequate upland protection of existing structures or would pose a threat or risk to adjacent property. The study must also demonstrate that the proposed hard shoreline stabilization will not adversely affect other infrastructure or adjacent shorelines.

6. Shoreline armorng such as rip rap rock revetments and other hard shoreline stabilization techniques are detrimental to river processes and habitat creation. Where allowed, shoreline armoring shall be designed, constructed and maintained in a manner that does not result in a net loss of shoreline ecological functions, including fish habitat, and shall conform to the requirements of the 2004 Washington State Department of Fish and Wildlife (or as amended) criteria and guidelines for integrated stream bank protection (Washington State Department of Fish and Wildlife, Washington Department of Ecology and U.S. Fish and Wildlife Service, Olympia, Washington), U. S. Army Corps of Engineers and other regulatory requirements. The hard shoreline stabilization must be designed and approved by an engineer licensed in the State of Washington and qualified to design shoreline stabilization structures.

7. Shoreline armoring shall be designed to the minimum size, height, bulk and extent necessary to remedy the identified hazard.

8. An applicant must demonstrate the following in order to qualify for the RCW 90.58.030(30(e)(iii)(ii) exemption from the requirement to obtain a shoreline substantial development permit for a proposed single family bulkhead and to insure that the bulkhead will be consistent with the SMP:
   a. Erosion from currents or waves is imminently threatening a legally established single family detached dwelling unit or one or more appurtenant structures; and
   b. The proposed bulkhead is more consistent with the City’s Master Program in protecting the site and adjoining shorelines and that non-structural alternatives such as slope drainage systems, bioengineering or vegetative growth stabilization, are not feasible or will not adequately protect a legally established residence or appurtenant structure; and
   c. The proposed bulkhead is located landward of the OHWM or it connects to adjacent, legally established bulkheads; and
   d. The maximum height of the proposed bulkhead is no more than one foot above the elevation of extreme high water on tidal waters as determined by the National Ocean Survey published by the National Oceanic and Atmospheric Administration.

9. Bulkheads or revetments shall be constructed of suitable materials that will serve to accomplish the desired end with maximum preservation of natural characteristics. Materials with the potential for water quality degradation shall not be used. Design and construction methods shall consider aesthetics and habitat protection. Automobile bodies, tires or other junk or waste material that may release undesirable chemicals or other material shall not be used for shoreline protection.

10. The builder of any bulkhead or revetment shall be financially responsible for determining the nature and the extent of probable adverse effects on fish and wildlife or on the property of others caused by his/her construction and shall propose and implement solutions approved by the City to minimize such effects.

11. When shoreline stabilization is required at a public access site, provision for safe access to the water shall be incorporated in the design whenever possible.
12. Placement of bank protection material shall occur from the top of the bank and shall be supervised by the property owner or contractor to ensure material is not dumped directly onto the bank face.

13. Bank protection material shall be clean and shall be of a sufficient size to prevent its being washed away by high water flows.

14. When riprap is washed out and presents a hazard to the safety of recreational users of the river, it shall be removed by the owner of such material.

15. Bank protection associated with bridge construction and maintenance may be permitted subject to the provisions of the SMP and shall conform to provisions of the State Hydraulics Code (RCW 77.55) and U.S. Army Corps of Engineer regulations.

G. Archaeological, Cultural and Historical Resources. In addition to the requirements of TMC 18.50.110, Archaeological/Paleontological Information Preservation Requirements, the following regulations apply:

1. All land use permits for projects within the shoreline jurisdiction shall be coordinated with affected tribes.

2. If the City determines that a site has significant archaeological, natural scientific or historical value, a substantial development that would pose a threat to the resources of the site shall not be approved.

3. Permits issued in areas documented to contain archaeological resources require a site inspection or evaluation by a professional archaeologist in coordination with affected Indian tribes. The City may require that development be postponed in such areas to allow investigation of public acquisition potential, retrieval and preservation of significant artifacts and/or development of a mitigation plan. Areas of known or suspected archaeological middens shall not be disturbed and shall be fenced and identified during construction projects on the site.

4. Developers and property owners shall immediately stop work and notify the City of Tukwila, the Washington Department of Archaeology and Historic Preservation and affected Indian tribes if archaeological resources are uncovered during excavation.

5. In the event that unforeseen factors constituting an emergency, as defined in RCW 90.58.030, necessitate rapid action to retrieve or preserve artifacts or data identified above, the project may be exempted from any shoreline permit requirements. The City shall notify the Washington State Department of Ecology, the State Attorney General's Office and the State Department of Archaeology and Historic Preservation Office of such an exemption in a timely manner.

6. Archaeological excavations may be permitted subject to the provision of this chapter.

7. On sites where historical or archaeological resources have been identified and will be preserved in situ, public access to such areas shall be designed and managed so as to give maximum protection to the resource and surrounding environment.

8. Interpretive signs of historical and archaeological features shall be provided subject to the requirements of the Public Access Section when such signage does not compromise the protection of these features from tampering, damage and/or destruction.

H. Environmental Impact Mitigation.

1. Halting the continuing decline of Puget Sound Chinook salmon and Southern Resident Orca calls for an improvement to current shoreline conditions, which have been degraded by human activity over time. All shoreline development and uses shall be mitigated to a minimum that results in no net loss of shoreline ecological functions through the careful location and design of all allowed development and uses. In cases where impacts to shoreline ecological functions from allowed development and uses are unavoidable, those impacts shall be mitigated according to the provisions of this section; in that event, the “no net loss” standard is met.

2. To the extent Washington's State Environmental Policy Act of 1971 (SEPA), chapter 43.21C RCW, is applicable, the analysis of environmental impacts from proposed shoreline uses or developments shall be conducted consistent with the rules implementing SEPA (TMC Chapter 21.04 and WAC 197-11).

3. For all development, mitigation sequencing shall be applied in the following order of priority:
   a. Avoiding the impact altogether by not taking a certain action or parts of an action.
b. Minimizing impacts by limiting the degree or magnitude of the action and its implementation by using appropriate technology or by taking affirmative steps to avoid or reduce impacts.

c. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment.

d. Reducing or eliminating the impact over time by preservation and maintenance operations.

e. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments.

f. Monitoring the impact and the compensation projects and taking appropriate corrective measures.

4. In determining appropriate mitigation measures applicable to shoreline development, lower priority measures shall be applied only where higher priority measures are determined by the City to be infeasible or inapplicable.

5. When mitigation measures are appropriate pursuant to the priority of mitigation sequencing above, preferential consideration shall be given to measures that replace the impacted functions directly and in the immediate vicinity of the impact. However, if mitigation in the immediate vicinity is not scientifically feasible due to problems with hydrology, soils, waves or other factors, then off-site mitigation within the Shoreline Jurisdiction may be allowed if consistent with the Shoreline Restoration Plan. Mitigation for projects in the Transition Zone must take place in the Transition Zone. In the event a site is not available in the Transition Zone to carry out required mitigation, the project proponent may contribute funds equivalent to the value of the required mitigation to an existing or future restoration project identified in the CIP to be carried out by a public agency in the Transition Zone.

I. Off Street Parking and Loading Requirements. In addition to the parking requirements in TMC 18.56, the following requirements apply to all development in the shoreline jurisdiction.

1. Any parking, loading, or storage facilities located between the river and any building must incorporate additional landscaping in accordance with the Vegetation Protection and Landscaping Section, or berming or other site planning or design techniques to reduce visual and/or environmental impacts from the parking areas utilizing the following screening techniques:

   a. A solid evergreen screen of trees and shrubs a minimum of six feet high; or
   b. Decorative fence a maximum of six feet high with landscaping. Chain link fence, where allowed, shall be vinyl coated and landscaped with native trailing vine or an approved non-native vine other than ivy, except where a security or safety hazard may exist; or
   c. Earth berms at a minimum of four feet high, planted with native plants in accordance with the Vegetation Protection and Landscaping Section.

2. Where a parking area is located in the shoreline jurisdiction and adjacent to a public access feature, the parking area shall be screened by a vegetative screen or a built structure that runs the entire length of the parking area adjacent to the amenity. The landscape screening shall comply with the Vegetation Protection and Landscaping Section.

3. Where public access to or along the shoreline exists or is proposed, parking areas shall provide pedestrian access from the parking area to the shoreline.

4. Parking facilities, loading areas and paved areas shall incorporate low impact development techniques wherever feasible, adequate storm water retention areas, oil/water separators and biofiltration swales, or other treatment techniques and shall comply with the standards and practices formally adopted by the City of Tukwila Public Works Department.

J. Land Altering Activities. All land altering activities in the shoreline jurisdiction shall be in conjunction with an underlying land development permit, except for shoreline restoration projects. All activities shall meet the following standards:

1. Clearing, Grading and Landfill.
   a. Land altering shall be permitted only where it meets the following criteria:

      (1) The work is the minimum necessary to accomplish an allowed shoreline use;
      (2) Impacts to the natural environment are minimized and mitigated;
      (3) Water quality, river flows and/or fish habitat are not adversely affected;
(4) Public access and river navigation are not diminished;
(5) The project complies with all federal and state requirements;
(6) The project complies with the vegetation protection criteria of the Vegetation
Protection and Landscaping Section;
(7) The project will achieve no net loss of shoreline ecological functions or processes. In
cases where impacts to shoreline ecological functions from an otherwise allowed land altering project are
unavoidable, those impacts shall be mitigated according to the provisions of this section. In that event, the
“no net loss” standard is met; and
(8) Documentation is provided to demonstrate that the fill comes from a clean source.

b. Clearing, grading and landfill activities, where allowed, shall include erosion control
mechanisms, and any reasonable restriction on equipment, methods or timing necessary to minimize the
introduction of suspended solids or leaching of contaminants into the river, or the disturbance of wildlife or
fish habitats in accordance with the standards in TMC Chapter 16.54, “Grading.”

2. Dredging.
   a. Dredging activities must comply with all federal and state regulations. Maintenance dredging
   of established navigation channels and basins must be restricted to maintaining previously dredged and/or
   existing authorized location, depth, and width.
   b. Where allowed, dredging operations must be designed and scheduled so as to ensure no
   net loss to shoreline ecological processes or functions. In cases where impacts to shoreline ecological
   functions from allowed dredging are unavoidable, those impacts shall be mitigated according to the provisions
   of this section; in that event, the “no net loss” standard is met.

K. Marinas, Boat Yards, Dry Docks, Boat Launches, Piers, Docks and Other Over-water Structures.
   1. General Requirements.
      a. A dock may be allowed when the applicant has demonstrated a need for moorage and that
         the following alternatives have been investigated and are not available or feasible:
         (1) commercial or marina moorage;
         (2) floating moorage buoys;
         (3) joint use moorage pier/dock.
      b. Prior to issuance of a Shoreline Substantial Development Permit for construction of piers,
         docks, wharves or other over-water structures, the applicant shall present
         [submittal to State or Federal agencies, as applicable.] approval from
         State or Federal agencies, as applicable.
      c. Structures must be designed by a qualified engineer and must demonstrate the project will
         result in no net loss of shoreline ecological function and will be stable against the forces of flowing water,
         wave action and the wakes of passing vessels.
      d. In-water structures shall be designed and located to minimize shading of native aquatic
         vegetation and fish passage areas. Removal of shoreline, riparian and aquatic vegetation shall be limited to
         the minimum extent necessary to construct the project. All areas disturbed by construction shall be replanted
         with native vegetation as part of the project.
      e. New or replacement in-water structures shall be designed and located such that natural
         hydraulic and geologic processes, such as erosion, wave action or floods will not necessitate the following:
         (1) reinforcement of the shoreline or stream bank with new bulkheads or similar artificial
             structures to protect the in-water structure; or
         (2) dredging.
      f. No structures are allowed on top of over-water structures except for properties located north
         of the Turning Basin.
      g. Piers or other associated structures in direct contact with water shall not be treated with
         preservatives unless the applicant can demonstrate that no feasible alternative to protect the materials exists
         and that non-wood alternatives are not economically feasible. In that case, only compounds approved for marine
         use may be used and must be applied by the manufacturer per current best management practices of the
         Western Wood Preservers Institute. The applicant must present verification that the best management
practices were followed. The preservatives must also be approved by the Washington Department of Fish and Wildlife.

All over-water structures shall be constructed and maintained in a safe and sound condition. Abandoned or unsafe over-water structures shall be removed or repaired promptly by the owner. Accumulated debris shall be regularly removed and disposed of properly so as not to jeopardize the integrity of the structure. Replacement of in-water structures shall include proper removal of abandoned or other man-made structures and debris.

Boat owners who store motorized boats on-site are encouraged to use best management practices to avoid fuel and other fluid spills.

1. Marinas, Boat Yards and Dry Docks
   a. All uses under this category shall be designed to achieve no net loss of shoreline ecological functions. In cases where impacts to shoreline ecological functions from uses allowed under this category are unavoidable, those impacts shall be mitigated according to the provisions of this chapter; in that event, the “no net loss” standard is met.
   b. Commercial/industrial marinas and dry docks shall be located no further upriver than Turning Basin #3.
   c. Marinas shall be located, designed, constructed and operated to avoid or minimize adverse impacts on fish, wildlife, water quality, native shoreline vegetation, navigation, public access, existing in-water recreational activities and adjacent water uses.
   d. Marinas shall submit a fuel spill prevention and contingency plan to the City for approval.
   e. Haul-out and boat maintenance facilities must meet the City’s stormwater management requirements and not allow the release of chemicals, petroleum or suspended solids to the river.
   f. Marinas, boat yards and dry docks must be located a minimum of 100 feet from fish and wildlife habitat areas (see “Sensitive Areas in the Shoreline” Map 5).

2. Boat Launches and Boat Lifts
   a. Boat launch ramps and vehicle access to the ramps shall be designed to not cause erosion; the use of pervious paving materials, such as grasscrete, are encouraged.
   b. Boat launch ramps shall be designed to minimize areas of landfill or the need for shoreline protective structures.
   c. Access to the boat ramp and parking for the ramp shall be located a sufficient distance from any frontage road to provide safe maneuvering of boats and trailers.
   d. Launching rails shall be adequately anchored to the ground.
   e. Launch ramps and boat lifts shall extend waterward past the OHWM only as far as necessary to achieve their purpose.
   f. Boat lifts and canopies must meet the standards of the U.S. Army Corps of Engineers Regional General Permit Number 1 for Watercraft Lifts in Fresh and Marine/Estuarine Waters within the State of Washington.

3. Over-water Structures
   a. The size of new over-water structures shall be limited to the minimum necessary to support the structure’s intended use and to provide stability in the case of floating docks. Structures must be compatible with any existing channel control or flood management structures.
   b. Over-water structures shall not extend waterward of the OHWM any more than necessary to permit launching of watercraft, while also ensuring that watercraft do not rest on tidal substrate at any time.
   c. Adverse impacts of over-water structures on water quality, river flows, fish habitat, shoreline vegetation, and public access shall be minimized and mitigated. Mitigation measures may include joint use of existing structures, open deckings or piers, replacement of non-native vegetation, installation of in-water habitat features or restoration of shallow water habitat.

Commented [NG32]: Not all environmentally sensitive areas are mapped. The City’s maps are a starting point but site specific analysis is required.

Commented [CL33]: The question came up when we worked on the new pedestrian bridge, whether the pedestrian bridge would be considered an overwater structure. The requirement for 30% grating was a safety issue for bicyclists, so I believe PW had to get a variance from this standard.

Commented [NG34R33]: The proposal is to consider bridges to be overwater structures. This is clarified in the use matrix.
d. Any proposals for in-water or over-water structures shall provide a pre-construction habitat evaluation, including an evaluation of salmonid and bull trout habitat and shoreline ecological functions, and demonstrate how the project achieves no net loss of shoreline ecological functions.

e. Over-water structures shall obtain all necessary state and federal permits prior to construction or repair.

f. All over-water structures must be designed by a qualified engineer to ensure they are adequately anchored to the bank in a manner so as not to cause future downstream hazards or significant modifications to the river geomorphology and are able to withstand high flows.

g. Over-water structures shall not obstruct normal public use of the river for navigation or recreational purposes.

h. Shading impacts to fish shall be minimized by using grating on at least 30% of the surface area of the over-water structure on residential areas and at least 50% of the over-water structure on all other properties. This standard may be modified for bridges if necessary to accommodate the proposed use. The use of skirting is not permitted.

i. If floats are used, the flotation shall be fully enclosed and contained in a shell (such as polystyrene) that prevents breakup or loss of the flotation material into the water, damage from ultraviolet radiation, and damage from rubbing against pilings or waterborne debris.

j. Floats may not rest on the tidal substrate at any time and stops on the piling anchoring the floats must be installed to ensure at least 1 foot of clearance above the substrate. Anchor lines may not rest on the substrate at any time.

k. The number of pilings to support over-water structures, including floats, shall be limited to the minimum necessary. Pilings shall conform to the pilings standards contained in the US Army Corps of Engineers Regional General Permit No. 6.

l. No over-water structure shall be located closer than five feet from the side property line extended, except that such structures may abut property lines for the common use of adjacent property owners when mutually agreed upon by the property owners in an easement recorded with King County. A copy of this agreement shall be submitted to the Department of Community Development and accompany an application for a development permit and/or Shoreline Permit.

5. Live-Aboards. New over-water residences are prohibited. Live-aboards may be allowed provided that:

a. They are for single-family use only.

b. They are located in a marina that provides shower and toilet facilities on land and there are no sewage discharges to the water.

c. Live-aboards do not exceed 10 percent of the total slips in the marina.

d. They are owner-occupied vessels.

e. There are on-shore support services in proximity to the live-aboards.

L. Signs in Shoreline Jurisdiction.

1. Signage within the shoreline buffer is limited to the following:

a. Interpretive signs and restoration signage, including restoration sponsor acknowledgment.

b. Signs for water-related uses.

c. Signs installed by a government agency for public safety along any public trail or at any public park.

d. Signs installed within the rights of way of any public right-of-way or bridge within the shoreline buffer. All signs shall meet the requirements of the Manual on Uniform Traffic Control Devices for Streets and Highways, current edition, published by the U.S. Department of Transportation.

e. Signs installed on utilities and wireless communication facilities denoting danger or other safety information, including emergency contact information.

2. Billboards and other off-premise signs are strictly forbidden in the shoreline buffer.

(Ord. 2346 §7, 2011)
18.44. Vegetation Protection and Landscaping

A. Purpose, Objectives and Applicability.
   1. The purpose of this section is to:
      a. Regulate the protection of existing trees and native vegetation in the shoreline jurisdiction;
      b. Establish requirements for removal of invasive plants at the time of development or re-development of sites;
      c. Establish requirements for landscaping for new development or re-development;
      d. Establish requirements for the long-term maintenance of native vegetation to prevent establishment of invasive species and promote shoreline ecosystem processes.
   2. The City’s goal is to:
      a. Preserve as many existing trees as possible and increase the number of native trees, shrubs and other vegetation in the shoreline because of their importance to shoreline ecosystem functions as listed below:
         (1) Overhead tree canopy to provide shade for water temperature control;
         (2) Habitat for birds, insects and small mammals;
         (3) Vegetation that overhangs the river to provide places for fish to shelter;
         (4) Source of insects for fish;
         (5) Filtering of pollutants and slowing of stormwater prior to its entering the river; and
         (6) A long-term source of woody debris for the river.
      b. In addition, trees and other native vegetation are important for aesthetics. It is the City’s goal that unsightly invasive vegetation, such as blackberries, be removed from the shoreline and be replaced with native vegetation to promote greater enjoyment of and access to the river.
      c. The City will provide information and technical assistance to property owners for improving vegetation in the shoreline jurisdiction and will work collaboratively with local citizen groups to assist property owners in the removal of invasive vegetation and planting of native vegetation, particularly for residential areas.
   3. With the exception of residential development/re-development of 4 or fewer residential units, all activities and developments within the shoreline environment must comply with the landscaping and maintenance requirements of this section, whether or not a shoreline substantial development permit is required. Single family residential projects are not exempt if implementing a shoreline stabilization project or overwater structure.
   4. The tree protection and retention requirements and the vegetation management requirements apply to existing uses as well as new or re-development.
   5. Minor Activities Allowed without a Permit or Exemption:
      a. The following activities are allowed without a permit or exemption:
         (1) Maintenance of existing, lawfully established areas of crop, vegetation, landscaping (including paths and trails) or gardens within a regulated critical area or its buffer. Examples include, mowing lawns, weeding, harvesting and replanting of garden crops, pruning, and planting of non-invasive ornamental vegetation or indigenous native species to maintain the general condition and extent of such areas. Cutting down trees and shrubs within a buffer is not covered under this provision. Excavation, filling, and construction of new landscaping features, such as concrete work, berms and walls, are not covered in this provision and are subject to review;
         (2) Noxious weed control within vegetative buffers, if work is selective only for noxious species; is done by hand removal/spraying of individual plants; spraying is conducted by a licensed applicator with the required aquatic endorsements from WADOE if work is in an aquatic site and no area-wide vegetation removal or grubbing is conducted. Control methods not meeting these criteria may still apply for a restoration exemption, or other authorization as applicable.

B. Tree Protection, Retention and Replacement.
   1. As many significant trees and as much native vegetation as possible are to be retained on a site proposed for development or re-development, taking into account the condition and age of the trees. As part of design review, the Director of Community Development or the Board of Architectural Review may require
alterations in the arrangement of buildings, parking or other elements of proposed development in order to retain
significant non-invasive trees, particularly those that provide shading to the river. Trees located on properties not
undergoing development or re-development may not be removed except those that interfere with access and
passage on public trails or that present an imminent hazard to existing structures or the public. If the hazard is
not readily apparent, the City may require an evaluation by an International Society of Arborists (ISA)-certified
arborist.

2. To protect the ecological functions that trees and native vegetation provide to the shoreline, removal of
any significant tree or native vegetation in the Shoreline Jurisdiction requires a Shoreline Tree Removal and
Vegetation Clearing Permit and is generally only allowed on sites undergoing development or redevelopment. Only
trees that interfere with access and passage on public trails or trees that present an imminent hazard to existing
structures or the public may be removed from sites without an issued building permit or Federal approval. Factors
that will be considered in approving tree removal include, but are not limited to: tree condition and health, age, risks
to structures, and potential for root or canopy interference with utilities.

3. Prior to any tree removal or site clearing, a Type 2 Shoreline Tree Removal and Vegetation
Clearing Permit application must be submitted to the Department of Community Development (DCD)
containing the following information:
   a. A vegetation survey on a site plan that shows the diameter, species and location of all
      significant trees and all existing native vegetation.
   b. A site plan that shows trees and native vegetation to be retained and trees to be removed
      and provides a table showing the number of significant trees to be removed and the number of replacement
trees required.
   c. Tree protection zones and other measures to protect any trees or native vegetation that are
      to be retained for sites undergoing development or re-development.
   d. Location of the OHWM, river buffer, Shoreline Jurisdiction boundary and any sensitive
      critical areas with their buffers.
   e. A landscape plan that shows diameter, species name, spacing and planting location for any
      required replacement trees and other proposed vegetation.
   f. An arborist evaluation justifying the removal of hazardous trees if required by DCD.
   g. An application fee per the current Land Use Permit Fee resolution.

4. Where permitted, significant trees that are removed from the shoreline shall be replaced pursuant
   to the tree replacement requirements shown below, up to a density of 100 trees per acre (including existing
trees). The Director or Planning Commission may require additional trees or shrubs to be installed to mitigate
any potential impact from the loss of this vegetation as a result of new development.

5. The property owner is required to ensure the viability and long-term health of trees planted for
   replacement through proper care and maintenance for the life of the project. Replaced trees that do not
   survive must be replanted in the next appropriate season for planting.

6. If all required replacement trees cannot be reasonably accommodated on the site, off-site tree
   replacement within the shoreline jurisdiction may be allowed at a site approved by the City. Priority for off-site tree
   planting will be at locations within the Transition Zone. If no suitable off-site location is available, the applicant shall
   pay into a tree replacement fund. The fee shall be based on the value of the replacement trees and their delivery,
labor for site preparation and plant installation, soil amendments, mulch, and staking supplies.
7. When a tree suitable for use as LWD is permitted to be removed from the shoreline buffer, the tree trunk and root ball (where possible) will be saved for use in a restoration project elsewhere in the shoreline jurisdiction. The applicant will be responsible for the cost of moving the removed tree(s) to a location designated by the City. If no restoration project or storage location is available at the time, the Director may waive this requirement. Trees removed in the shoreline jurisdiction outside the buffer shall be placed as LWD in the buffer (not on the bank), if feasible. Priority for LWD placement projects will be in the Transition Zone.

8. Dead or dying trees located within the buffer or undeveloped upland portion of the Shoreline Jurisdiction shall be left in place as wildlife snags, unless they present a hazard to structures, facilities or the public. Dead or dying trees within developed or landscaped areas shall be replaced 1:1 in the next appropriate season for planting.

9. Topping of trees is prohibited unless absolutely necessary to protect overhead utility lines. Topping of trees and will be regulated as removal and tree replacement will be required.

10. Trees may only be pruned to lower their height to prevent interference with an overhead utility line with prior approval by the Director. The pruning must be carried out under the direction of a Qualified Tree Professional or performed by the utility provider under the direction of a Qualified Tree Professional. The crown shall be maintained to at least 2/3 the height of the tree prior to pruning.

C. Tree Protection During Development and Redevelopment

10 For new development or re development where trees are proposed for retention, tree protection zones shall be indicated on site plans and shall be established in the field prior to commencement of any construction or site clearing activity. A minimum 4 feet high construction barrier shall be installed around significant trees and stands of native trees or vegetation to be retained. Minimum distances from the trunk for the construction barriers shall be based on the approximate age of the tree (height and canopy) as follows:

a. Young trees (have reached less than 20% of life expectancy): 0.75 feet per inch of trunk diameter.

b. Mature trees (have reached 20-80% of life expectancy): 1 foot per inch of trunk diameter.

c. Over mature trees (have reached greater than 80% of life expectancy): 1.5 feet per inch of trunk diameter.

All trees not proposed for removal as part of a project or development shall be protected using Best Management Practices and the standards below:

1. The Critical Root Zones (CRZ) for all trees designated for retention, on site or on adjacent property as applicable, shall be identified on all construction plans, including demolition, grading, civil and landscape site plans.

2. Any roots within the CRZ exposed during construction shall be covered immediately and kept moist with appropriate materials. The City may require a third-party Qualified Tree Professional to review longterm viability of the tree.

3. Physical barriers, such as 6-foot chain link fence or plywood or other approved equivalent, shall be placed around each individual tree or grouping at the CRZ.

4. Minimum distances from the trunk for the physical barriers shall be based on the approximate age of the tree (height and canopy) as follows:

a. Young trees (trees which have reached less than 20% of life expectancy): 0.75 per inch of trunk diameter.

b. Mature trees (trees which have reached 20-80% of life expectancy): 1 foot per inch of trunk diameter.

c. Over mature trees (trees which have reached greater than 80% of life expectancy): 1.5 feet per inch of trunk diameter.

5. Alternative protection methods may be used that provide equal or greater tree protection if approved by the Director.

6. A weatherproof sign shall be installed on the fence or barrier that reads:

"TREE PROTECTION ZONE - THIS FENCE SHALL NOT BE REMOVED OR ENCROACHED UPON. No soil disturbance, parking, storage, dumping or burning of materials is allowed within the Critical Root Zone. The value of this tree is $ [insert value of tree as determined by a Qualified Tree Professional here]."
Damage to this tree due to construction activity that results in the death or necessary removal of the tree is subject to the Violations section of TMC Chapter 18.54.

7. All tree protection measures installed shall be inspected by the City and, if deemed necessary, a Qualified Tree Professional, prior to beginning construction or earth moving.

8. Any branches or limbs that are outside of the CRZ and might be damaged by machinery shall be pruned prior to construction by a Qualified Tree Professional. No construction personnel shall prune affected limbs except under the direct supervision of a Qualified Tree Professional.

9. The CRZ shall be covered with 4 to 6 inches of wood chip mulch. Mulch shall not be placed directly against the trunk. A 6-inch area around the trunk shall be free of mulch.

10. Any branches or limbs that are outside of the CRZ and might be damaged by machinery shall be pruned prior to construction by a Qualified Tree Professional. No construction personnel shall prune affected limbs except under the direct supervision of a Qualified Tree Professional.

11. Grade changes within 10 feet of the CRZ shall be approved by the City prior to implementation.

12. The applicant is responsible for ensuring that the CRZ of trees on adjacent properties are not impacted by the proposed development.

13. A pre-construction inspection shall be conducted by the City to finalize tree protection actions.

DC. Landscaping. This section presents landscaping standards for the Shoreline Jurisdiction and is divided into a general section and separate sections for the River Buffer and for the remaining part of the Shoreline Jurisdiction for each environment designation.

1. General Requirements. For any new development or redevelopment in the Shoreline Jurisdiction, except single family residential development of 4 or fewer lots, invasive vegetation must be removed and native vegetation planted and maintained in the River Buffer, including the river bank.

   a. The landscaping requirements of this subsection apply for any new development or redevelopment in the Shoreline Jurisdiction, except single family residential development of 4 or fewer lots. The extent of landscaping required will depend on the size of the proposed project. New development or full redevelopment of a site will require landscaping of the entire site. For smaller projects, the Director will review the intent of this section and the scope of the project to determine a reasonable amount of landscaping to be carried out. Trees and other vegetation shading the river shall be retained or replanted when riprap is placed.

   b. Invasive vegetation must be removed as part of site preparation and native vegetation planted, including the river bank, to OHWM.

   c. Trees and other vegetation shading the river shall be retained or replanted when riprap is placed.

   d. Removal of invasive species shall be done by hand or with hand-held power tools. Where not feasible and mechanized equipment is needed, the applicant must obtain a Shoreline Tree Removal and Vegetation Clearing Permit and show how the slope stability of the bank will be maintained. The plan must be submitted indicating how the work will be done and what erosion control and tree protection features will be utilized. Federal and State permits may be required for vegetation removal with mechanized equipment.

   e. All vegetation shading the river shall be retained or replanted when riprap is placed, as specified in the approved tree permit if a permit is required.

   f. Removal of invasive vegetation may be phased over several years prior to planting, if such phasing is provided for by a plan approved by the Director to allow for alternative approaches, such as sheet mulching and goat grazing. The method selected shall not destabilize the bank or cause erosion.

   g. A combination of native trees, shrubs and groundcovers (including grasses, sedges, rushes and vines) shall be planted. The plants listed in the Riparian Restoration and Management Table of the 2004 Washington Stream Habitat Restoration Guidelines (Washington Department of Fish and Wildlife, Washington...
City of Tukwila Shoreline Update

Department of Ecology, and U.S. Fish and Wildlife Service, Olympia, Washington, as amended) shall provide
the basis for plant selection. Site conditions, such as topography, exposure, and hydrology shall be taken
into account for plant selection. Other species may be approved if there is adequate justification.

h. Non-native trees may be used as street trees in cases where conditions are not appropriate
for native trees (for example where there are space or height limitations or conflicts with utilities).
   i. Plants shall meet the current American Standard for Nursery Stock (American Nursery and
      Landscape Association – ANLA).

j. Plant sizes in the non-buffer areas of all Shoreline Environments shall meet the following
minimum size standards:

<table>
<thead>
<tr>
<th>Plant Type</th>
<th>Minimum Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deciduous trees</td>
<td>2-inch caliper</td>
</tr>
<tr>
<td>Conifers</td>
<td>6 – 8 foot height</td>
</tr>
<tr>
<td>Shrubs</td>
<td>24-inch height</td>
</tr>
<tr>
<td>Groundcover/grasses</td>
<td>4-inch or 1 gallon container</td>
</tr>
</tbody>
</table>

k. Smaller plant sizes (generally one gallon, bareroot, plugs, or stakes, depending on plant
   species) are preferred for buffer plantings. Willow stakes must be at least 1/2-inch in diameter.

l. Site preparation and planting of vegetation shall be in accordance with best management
   practices for ensuring the vegetation’s long-term health and survival.

m. Plants may be selected and placed to allow for public and private view corridors and/or
   access to the water’s edge.

n. Native vegetation in the shoreline installed in accordance with the preceding standards shall
   be maintained by the property owner to promote healthy growth and prevent establishment of invasive
   species. Invasive plants (such as blackberry, ivy, knotweed, bindweed) shall be removed on a regular basis,
   according to the approved maintenance plan.

o. Areas disturbed by removal of invasive plants shall be replanted with native vegetation where
   necessary to maintain the density shown in TMC Section 18.44. and must be replanted in a
   timely manner, except where a long-term removal and re-vegetation plan, as approved by the City, is being
   implemented.

p. Landscape plans shall include a detail on invasive plant removal and soil preparation.

q. The following standards apply to utilities and loading docks located in the shoreline
   jurisdiction.
   (1) Utilities such as pumps, pipes, etc. shall be suitably screened with native vegetation;
   (2) Utility easements shall be landscaped with native groundcover, grasses or other low-
       growing plants as appropriate to the shoreline environment and site conditions;
   (3) Allowed loading docks and service areas located waterward of the development shall
       have landscaping that provides extensive visual separation from the river.

2. River Buffer Landscaping Requirements in all Shoreline Environments. The River Buffer in
   all shoreline environments shall function, in part, as a vegetation management area to filter sediment, capture
   contaminants in surface water run-off, reduce the velocity of water run-off, and provide fish and wildlife habitat.

   a. A planting plan prepared by a licensed landscape architect or an approved biologist shall be
      submitted to the City for approval that shows plant species, size, number and spacing. The requirement for
      a landscape architect or biologist may be waived by the Director for single family property owners (when
      planting is being required as mitigation for construction of overwater structures or shoreline stabilization), if
      the property owner accepts technical assistance from City staff.

   b. Plants shall be installed from the OHWM to the upland edge of the River Buffer unless the
      Director determines that site conditions would make planting unsafe.

   c. Plantings close to and on the bank shall include native willows, red osier dogwood and other
      native vegetation that will extend out over the water, to provide shade and habitat functions when mature.
      Species selected must be able to withstand seasonal water level fluctuations.
d. Minimum plant spacing in the buffer shall follow the River Buffer Vegetation Planting Densities Table shown in TMC Section 18.44. Existing non-invasive plants may be included in the density calculations.

e. Irrigation for buffer plantings is required for at least two dry seasons or until plants are established. An irrigation plan is to be included as part of the planting plan.

f. In the event that a development project allows for setback and benching of the shoreline along an existing levee or revetment, the newly created mid-slope bench area shall be planted and maintained with a variety of native vegetation appropriate for site conditions.

g. The Department Director, in consultation with the City's environmentalist, of willow planting and installation of willow stakes to be counted toward the tree replacement standard in the buffer if proposed as a measure to control invasive plants and increase buffer function.

3. Landscaping Requirements for the Urban Conservancy and High Intensity Environments — Outside of the River Buffer. For the portions of property within the Shoreline Jurisdiction landward of the River Buffer the landscape requirements in the General section of this chapter and the requirements for the underlying zoning as established in TMC Chapter 18.52 shall apply except as indicated below.

a. Parking Lot Landscape Perimeters: One native tree for each 20 lineal feet of required perimeter landscaping, one shrub for each 4 lineal feet of required perimeter landscaping, and native groundcovers to cover 90% of the landscape area within 3 years, planted at a minimum spacing of 12 inches on-center.

b. Interior Parking Lot Landscaping: Every 300 square feet of paved surface requires 10 square feet of interior landscaping within landscape islands separated by no more than 150 feet between islands.

c. Landscaping shall be provided at yards not adjacent to the river, with the same width as required in the underlying zoning district. This standard may be reduced as follows:

(1) Where development provides a public access corridor between off-site public area(s) and public shoreline areas, side yard landscaping may be reduced by 25 percent to no less than 3 feet; or

(2) Where development provides additional public access area(s) (as allowed by the High Intensity and Urban Conservancy Environment Development Standards) equal in area to at least 2.5% of total building area, front yard landscaping may be reduced by 25 percent.

D. Vegetation Management in the Shoreline Jurisdiction. The requirements of this section apply to all existing and new development within the shoreline jurisdiction.

1. Trees and shrubs may only be pruned for safety, to maintain views or access corridors and trails by pruning up or on the sides of trees, to maintain clearance for utility lines, and/or for improving shoreline ecological function. No more than 25% may be pruned from a tree within a 36 month period without prior City review. This type of pruning is exempt from any permit requirements. Topping of trees is prohibited except when absolutely necessary to avoid interference with utility facilities.

2. Plant debris from removal of invasive plants or pruning shall be removed from the site and disposed of properly.

3. Use of pesticides.
a. Pesticides (including herbicides, insecticides, and fungicides) shall not be used in the shoreline jurisdiction except where:

1. Alternatives such as manual removal, biological control, and cultural control are not feasible given the size of the infestation, site characteristics, or the characteristics of the invasive plant species;
2. The use of pesticides has been approved through a comprehensive vegetation or pest management and monitoring plan;
3. The pesticide is applied in accordance with state regulations;
4. The proposed herbicide is approved for aquatic use by the U.S. Environmental Protection Agency; and
5. The use of pesticides in the shoreline jurisdiction is approved in writing by the City and the applicant presents a copy of the Aquatic Pesticide Permit issued by the Department of Ecology or Washington Department of Agriculture.

b. Self-contained rodent bait boxes designed to prevent access by other animals are allowed.
c. Sports fields, parks, golf courses and other outdoor recreational uses that involve maintenance of extensive areas of turf shall provide and implement an integrated turf management program or integrated pest management plan designed to ensure that water quality in the river is not adversely impacted.

4. Restoration Project Plantings: Restoration projects may overplant the site as a way to discourage the re-establishment of invasive species. Thinning of vegetation to improve plant survival and health without a separate shoreline vegetation removal permit may be permitted five to ten years after planting if this is approved as part of the restoration project’s maintenance and monitoring plan and with approval by the City prior to thinning work.

E. Maintenance and Monitoring.

1. A five-year monitoring and maintenance plan must be approved by the City prior to permit issuance. The monitoring period will begin when the restoration is accepted by the City and as-built plans have been submitted.
2. Monitoring reports shall be submitted annually for City review up until the end of the monitoring period. Reports shall measure survival rates against project goals and present contingency plans to meet project goals.
3. Mitigation will be complete after project goals have been met and accepted by the City environmentalist.
4. A performance bond or financial security equal to 150% of the cost of labor and materials required for implementation of the planting, maintenance and monitoring shall be submitted prior to City acceptance of project.

(Ord. 2346 §8, 2011)

18.44.00070 Environmentally Sensitive Critical Areas within the Shoreline Jurisdiction

A. Purpose.

The Growth Management Act (RCW 36.70A) requires protection of critical areas (sensitive areas), defined as wetlands, watercourses, frequently flooded areas, geologically hazardous areas, critical aquifer recharge areas, fish and wildlife conservation areas, and abandoned mine areas.

The purpose of protecting environmentally sensitive areas within the shoreline jurisdiction is to:

- Minimize development impacts on the natural functions and values of these areas.
- Protect and maintain the quality of water resources.
- Minimize turbidity and pollution of wetlands and fish bearing waters and maintain wildlife habitat.
- Prevent erosion and the loss of slope and soil stability caused by the removal of trees, shrubs, and root systems of vegetative cover.

Commented [CL44]: This provision sparked by request from the City’s habitat manager to use the overplanting approach as a way to discourage the re-establishment of invasive species. Thinning of vegetation to improve plant survival and health without a separate shoreline vegetation removal permit may be permitted five to ten years after planting if this is approved as part of the restoration project’s maintenance and monitoring plan and with approval by the City prior to thinning work.

Commented [CL45]: Mitigation sequencing requires a monitoring period.

Commented [AC46]: This is similar to the requirement for areas outside of the shoreline.

Commented [CL47]: This section needs to match the concurrent SAO update. I believe this will address comments Minnie received from Donna Bunten in March, 2012 regarding corrections needed. See PDF of email exchange with Minnie, saved here: Annotated 18.44 - corrections neededemail exchange w Donna Bunten-Ecology-SAO references.pdf.

Commented [NG48R47]: The proposal is to eliminate the duplication of Critical Areas regulations and apply one set of rules with the few exceptions added below.
b. The Director may allow modifications to the required contents of the study where, in the judgment of a qualified professional, more or less information is required to adequately address the potential sensitive area impacts and required mitigation.

c. If there is written agreement between the Director and the applicant concerning the sensitive area classification and type, the Director may waive the requirement for sensitive area studies provided that no adverse impact to sensitive areas or buffers will result. There must be substantial evidence that the sensitive areas delineation and classification are correct, that there will be no detrimental impact to the sensitive areas or buffers, and that the goals, purposes, objectives and requirements of the Shoreline Management Program will be followed.

Applicable Critical Areas Regulations

The following critical areas shall be regulated in accordance with the provisions of the Critical Areas Ordinance TMC Chapter 18.45, adopted [Date to be added], which is herein incorporated by reference into this SMP, except for the provisions excluded in subsection B of this Section. Said provisions shall apply to any use, alteration, or development within shoreline jurisdiction whether or not a shoreline permit or written statement of exemption is required. Unless otherwise stated, no development shall be constructed, located, extended, modified, converted, or altered, or land divided without full compliance with the provision adopted by reference and the Shoreline Master Program. Within shoreline jurisdiction, the regulations of TMC Chapter 18.45 shall be liberally construed together with the Shoreline Master Program to give full effect to the objectives and purposes of the provisions of the Shoreline Master Program and the Shoreline Management Act. If there is a conflict or inconsistency between any of the adopted provisions below and the Shoreline Master Program, the most restrictive provisions shall prevail.

1. Wetlands
2. Watercourses (Type F, Type Np, Type Ns)
3. Areas of potential geologic instability
4. Abandoned mine areas
5. Fish and wildlife habitat conservation areas
6. Frequently flooded areas

B. The following provisions in TMC Chapter 18.45 do not apply:

1. Reasonable Use Exception (TMC Section 18.45.180). Exceptions within shoreline jurisdiction shall require a shoreline variance based on the variance criteria listed in TMC Section 18.44.130. D and WAC 173-27-170.
2. Activities and alterations to shorelines of the state and their buffers shall be subject to the provisions of this Master Program.
3. Shoreline buffer widths are defined in TMC Section 18.44.040.
4. Future amendments to the Critical Areas Ordinance require Department of Ecology approval of an amendment to this Master Program to incorporate updated language.
5. If provisions of the Critical Areas Ordinance conflict with provisions of this Master Program, the provisions the most protective of the ecological resource shall apply, as determined by the Director.

C. Areas of seismic instability are also defined as critical areas. These areas are regulated by the Washington State Building Code, rather than by Section 18.44.070 of this chapter. Additional building standards applicable to frequently flooded areas are included in the Flood Zone Management Code (TMC Chapter 16.52).

E. Procedures. When an applicant submits an application for any building permit, subdivision, short subdivision or any other land use review that approves a use, development or future construction, the location...
and dimensions of all sensitive areas and buffers on the site shall be indicated on the plans submitted. When a sensitive area is identified, the following procedures apply:

1. The applicant shall submit the relevant sensitive area study as required by this chapter.
2. The Department of Community Development will review the information submitted in the sensitive area studies to verify the information, confirm the nature and type of the sensitive area, and ensure the study is consistent with the Shoreline Master Program. At the discretion of the Director, sensitive area studies may undergo peer review, at the expense of the applicant.
3. Denial of use or development. A use or development will be denied if the Director determines that the applicant cannot ensure that potential dangers and costs to future inhabitants of the development, adjacent properties, and Tukwila are minimized and mitigated to an acceptable level.
4. Preconstruction meeting. The applicant, specialist(s) of record, contractor, and department representatives will be required to attend preconstruction meetings prior to any work on the site.
5. Construction monitoring. The specialist(s) of record shall be retained to monitor the site during construction.
6. On site identification. The Director may require the boundary between a sensitive area and its buffer or between the buffer and any development or use to be permanently identified with fencing, or with a wood or metal sign with treated wood, concrete or metal posts. Size will be determined at the time of permitting, and wording shall be as follows: “Protection of this natural area is in your care. Do not alter or disturb. Please call the City of Tukwila (206 431 3670) for more information.”

F. Wetland Determinations and Classifications:
1. Wetlands and their boundaries are established by using the Washington State Wetland and Delineation Manual, as required by RCW 36.70A.175 (Ecology Publication #96 94) and consistent with the 1987 Corps of Engineers Wetland Delineation Manual.
2. Wetland determinations shall be made by a qualified professional (certified Wetland Scientist or non-certified with at least two years of full time work experience as a wetland professional).
3. Wetland areas within the City of Tukwila have certain characteristics, functions and values and have been influenced by urbanization and related disturbances. Wetland functions include, but are not limited to the following: improving water quality; maintaining hydrologic functions (reducing peak flows, decreasing erosion, groundwater); and providing habitat for plants, mammals, fish, birds, and amphibians. Wetland functions shall be evaluated using the Washington State Functional Assessment Method.
4. Wetlands shall be designated in accordance with the Washington State Wetlands Rating System for Western Washington (Washington State Department of Ecology, August 2004, Publication #04 06 025) as Category I, II, III or IV as listed below:
   a. Category I wetlands are those that:
      (1) represent a unique or rare wetland type; or
      (2) are more sensitive to disturbance than most wetlands; or
      (3) are relatively undisturbed and contain ecological attributes that are impossible to replace within a human lifetime; or
      (4) provide a high level of functions.
      The following types of wetlands listed by the Washington State Department of Ecology and potentially found in Tukwila’s Shoreline Jurisdiction are Category I:
      (a) Estuarine wetlands (deepwater tidal habitats with a range of fresh brackish marine water chemistry, and daily tidal cycles, salt and brackish marshes, intertidal mudflats, mangrove swamps, bays, sounds, and coastal rivers).
      (b) Wetlands that perform many functions well and score at least 70 points in the Western Washington Wetlands Rating System.
      (c) Waterfowl or shorebird areas designated by the State Department of Fish and Wildlife.
   b. Category II wetlands are difficult, though not impossible to replace and provide high levels of some functions. These wetlands occur more commonly than Category I wetlands, but still need a relatively high level of protection. Category II wetlands potentially in Tukwila’s Shoreline Jurisdiction include:
(1) Estuarine wetlands Any estuarine wetland smaller than an acre, or those that are disturbed and larger than 1 acre are Category II wetlands.

(2) Wetlands that perform functions well Wetlands scoring between 51.69 points (out of 100) on the questions related to the functions present are Category II wetlands.

c. Category III wetlands have a moderate level of functions (scores between 30.50 points).

Wetlands scoring between 30.50 points generally have been disturbed in some ways and are often less diverse or more isolated from other natural resources in the landscape than Category II wetlands.

d. Category IV wetlands have the lowest levels of functions (scores less than 30 points) and are often heavily disturbed. While these are wetlands that should be able to be replaced or improved, they still need protection because they may provide some important functions. Any disturbance of these wetlands must be considered on a case by case basis.

G. Watercourse Designation and Ratings.

1. Watercourse ratings are based on the existing habitat functions and are rated as follows:

   a. Type 1 (S) Watercourse: Watercourses inventoried as Shorelines of the State under RCW 90.58 (Green/Duwamish River).

   b. Type 2 (F) Watercourse: Those watercourses that have either perennial (year-round) or intermittent flows and support salmonid fish use.

   c. Type 3 (NP) Watercourse: Those watercourses that have perennial flows and are not used by salmonid fish.

   d. Type 4 (NS) Watercourse: Those watercourses that have intermittent flows and are not used by salmonid fish.

2. Watercourse sensitive area studies shall be performed by a qualified professional (hydrologist, geologist, engineer or other scientist with experience in preparing watercourse assessments).

H. Fish and Wildlife Habitat Conservation Areas.

1. Fish and wildlife habitat conservation areas within the shoreline jurisdiction include the habitats listed below:

   a. Areas with which endangered, threatened, and sensitive species have a primary association;

   b. Habitats and species of local importance, including but not limited to bald eagle habitat, heron rookeries, osprey nesting areas;

   c. Waters of the State (i.e., the Green/Duwamish River itself);

   d. State natural area preserves and natural resource conservation areas; and

   e. Areas critical for habitat connectivity.

2. The approximate location and extent of known fish and wildlife habitat conservation areas are identified in the Shoreline Inventory and Characterization Report and are shown on the Sensitive Areas in the Shoreline Jurisdiction map. Only the salmon habitat enhancement project sites completed or underway are shown as Fish and Wildlife Conservation Areas on the Sensitive Areas in the Shoreline Jurisdiction Map. Streams are shown as watercourses. The river is not shown as a Fish and Wildlife Habitat Conservation Area for the sake of simplicity. Fish and wildlife habitat conservation areas correspond closely with the areas identified as regulated watercourses and wetlands and their buffers, as well as off channel habitat areas created to improve salmon habitat (shown on the Sensitive Areas Map) in the Shoreline jurisdiction. The Green/Duwamish River is recognized as the most significant fish and wildlife habitat corridor. In addition Gilliam Creek, Riverton Creek, Southgate Creek, Hamman Creek in the North Potential Annexation Area (PAA), and Johnson Creek (South PAA) all provide salmonid habitat.

I. Wetland Watercourse and Fish and Wildlife Habitat Conservation Area Buffers.

1. Purpose and Intent of Buffer Establishment.

   a. A buffer area shall be established adjacent to designated sensitive areas. The purpose of the buffer area shall be to protect the integrity, functions and values of the sensitive areas. Any land alteration must be located out of the buffer areas as required by this section.

   b. Buffers are intended in general to:
(1) Minimize long term impacts of development on properties containing sensitive areas.
(2) Protect sensitive areas from adverse impacts during development.
(3) Preserve the edges of wetlands and the banks of watercourses and fish and wildlife habitat conservation areas for their critical habitat value.
(4) Provide an area to stabilize banks, to absorb overflow during high water events and to allow for slight variation of aquatic system boundaries over time due to hydrologic or climatic effects.
(5) Provide shading to watercourses and fish and wildlife habitat conservation areas to maintain stable water temperatures and provide vegetative cover for additional wildlife habitat.
(6) Provide input of organic debris and nutrient transport in watercourses.
(7) Reduce erosion and increased surface water run off.
(8) Reduce loss of or damage to property.
(9) Intercept fine sediments from surface water run off and serve to minimize water quality impacts.
(10) Protect the sensitive area from human and domestic animal disturbances.

2. Establishment of Buffer Widths. The following standard buffers shall be established:
a. Wetland buffers (measured from the wetland edge):
   (1) Category I & II Wetland: 100 foot buffer.
   (2) Category III Wetland: 80 foot buffer.
   (3) Category IV Wetland: 50 foot buffer.
b. Watercourse buffers (measured from the OHWM):
   (1) Type 1 (S) Watercourse: The buffer width for the Green/Duwamish River is established in the Shoreline Environment Designations of this SMP for the three designated shoreline environments.
   (2) Type 2 (F) Watercourse: 100 foot wide buffer.
   (3) Type 3 (NP) Watercourse: 80 foot wide buffer.
   (4) Type 4 (NS) Watercourse: 50 foot wide buffer.
c. Fish and Wildlife Habitat Conservation Areas: The buffer will be the same as the river buffer established for each Shoreline Environment measured from the OHWM, unless an alternate buffer is established and approved at the time a fish and wildlife habitat restoration project is undertaken.

3. Sensitive Area Buffer Setbacks. All commercial and industrial buildings shall be set back 15 feet and all other development shall be set back 10 feet from the sensitive area buffer’s edge. The building setbacks shall be measured from the foundation to the buffer’s edge. Building plans shall also identify a 20 foot area beyond the buffer setback within which the impacts of development will be reviewed. The Director may waive setback requirements when a site plan demonstrates there will be no adverse impacts to the buffer from construction or occasional maintenance activities.

4. Reduction of Standard Buffer Width. Except for the Green/Duwamish River (Type 1 watercourse for which any variation in the buffer shall be regulated under the shoreline provisions of this program), the buffer width may be reduced on a case by case basis, provided the reduced buffer area does not contain slopes 15% or greater. In no case shall the approved buffer width result in greater than a 50% reduction in width. Buffer reduction with enhancement may be allowed as part of a Substantial Development Permit if:
a. Additional protection to wetlands or watercourses will be provided through the implementation of a buffer enhancement plan; and
b. The existing condition of the buffer is degraded; and
 c. Buffer enhancement includes, but is not limited to, the following:
   (1) Planting vegetation that would increase value for fish and wildlife habitat or improve water quality;
   (2) Enhancement of wildlife habitat by incorporating structures that are likely to be used by wildlife, including wood duck boxes, bat boxes, snags, root wads/stumps, birdhouses and heron nesting areas; or
   (3) Removing non native plant species and noxious weeds from the buffer area and replanting the area.
5. **Increase in Standard Buffer Width.** Buffers for sensitive areas will be increased when they are determined to be particularly sensitive to disturbance or the proposed development will create unusually adverse impacts. Any increase in the width of the buffer shall be required only after completion of a sensitive areas study by a qualified biologist that documents the basis for such increased width. An increase in buffer width may be appropriate when:
   a. The development proposal has the demonstrated potential for significant adverse impacts upon the sensitive area that can be mitigated by an increased buffer width; or
   b. The area serves as habitat for endangered, threatened, sensitive or monitor species listed by the federal government or the State.

6. **Maintenance of Vegetation in Buffers.** Every reasonable effort shall be made to maintain any existing viable native plant life in the buffers. Vegetation may be removed from the buffer as part of an enhancement plan approved by the Director. Enhancements will ensure that slope stability and wetland or watercourse quality will be maintained or improved. Any disturbance of the buffers shall be replanted with a diverse plant community of native northwest species that are appropriate for the specific site as determined by the Director. If the vegetation must be removed, or the vegetation becomes damaged or dies because of the alterations of the landscape, then the applicant for a permit must replace existing vegetation with comparable specimens, approved by the Director, which will restore buffer functions within five years.

7. **Areas of Potential Geologic Instability.**
   a. **Classification.** Areas of potential geologic instability are classified as follows:
      a. Class 1 area, where landslide potential is low, and which slope is less than 15%;
      b. Class 2 areas, where landslide potential is moderate, which slope is between 15% and 40%, and which are underlain by relatively permeable soils;
      c. Class 3 areas, where landslide potential is high, which include areas sloping between 15% and 40%, and which are underlain by relatively impermeable soils or by bedrock, and which also include all areas sloping more steeply than 40%;
      d. Class 4 areas, where landslide potential is very high, which include sloping areas with mappable zones of groundwater seepage, and which also include existing mappable landslide deposits regardless of slope.
   b. **Exemptions.** The following areas are exempt from regulation as geologically hazardous areas:
      a. Temporary stockpiles of topsoil, gravel, beauty bark or other similar landscaping or construction materials;
      b. Slopes related to materials used as an engineered pre load for a building pad;
      c. Any temporary slope that has been created through legal grading activities under an approved permit may be re graded;
      d. Roadway embankments within right of way or road easements; and
      e. Slopes retained by approved engineered structures, except riverbank structures and armoring.
   c. **Geotechnical Study Required.**
      a. Development or alterations to areas of potential geologic instability that form the river banks shall be governed by the policies and requirements of the Shoreline Stabilization section of this chapter. Development proposals on all other lands containing or threatened by an area of potential geologic instability Class 2 or higher shall be subject to a geotechnical study. The geotechnical report shall analyze and make recommendations on the need for and width of any setbacks or buffers necessary to insure slope stability. Development proposals shall then include the buffer distances as defined within the geotechnical report. The geotechnical study shall be performed by a qualified professional geotechnical engineer, licensed in the State of Washington.
      b. Prior to permitting alteration of an area of potential geologic instability, the applicant must demonstrate one of the following:
There is no evidence of past instability or earth movement in the vicinity of the proposed development, and where appropriate, quantitative analysis of slope stability indicates no significant risk to the proposed development or surrounding properties; or

The area of potential geologic instability can be modified or the project can be designed so that any potential impact to the project and surrounding properties is eliminated, slope stability is not decreased, and the increase in surface water discharge or sedimentation shall not decrease slope stability.

4. **Buffers for Areas of Potential Geologic Instability**
   a. Buffers are intended to:
      1. Minimize long term impacts of development on properties containing sensitive areas;
      2. Protect sensitive areas from adverse impacts during development;
      3. Prevent loading of potentially unstable slope formations;
      4. Protect slope stability;
      5. Provide control of, and attenuation of, precipitation, surface water and stormwater runoff;
      6. Reduce loss of or damage to property; and
      7. Prevent the need for future shoreline armoring.
   b. Buffers may be increased by the Director when an area is determined to be particularly sensitive to the disturbance created by a development. Such a decision will be based on a City review of the report as prepared by a qualified geotechnical engineer and by a site visit.

5. **Additional Requirements**
   a. Where any portion of an area of potential geologic instability is cleared for development, a landscaping plan for the site shall include tree replanting in accordance with the Vegetation Protection and Landscaping section of this chapter. Vegetation shall be sufficient to provide erosion and stabilization protection.
   b. It shall be the responsibility of the applicant to submit, consistent with the findings of the geotechnical report, structural plans which were prepared and stamped by a structural engineer. The plans and specifications shall be accompanied by a letter from the geotechnical engineer who prepared the geotechnical report stating that in his/her judgment, the plans and specifications conform to the recommendations in the geotechnical report; the risk of damage to the proposed development site from soil instability will be minimal subject to the conditions set forth in the report; and the proposed development will not increase the potential for soil movement.
   c. Further recommendations signed and sealed by the geotechnical engineer shall be provided should there be additions or exceptions to the original recommendations based on the plans, site conditions or other supporting data. If the geotechnical engineer who reviewed the plans and specifications is not the same engineer who prepared the geotechnical report, the new engineer shall, in a letter to the City accompanying the plans and specifications, express his or her agreement or disagreement with the recommendations in the geotechnical report and state that the plans and specifications conform to his or her recommendations.
   d. The architect or structural engineer shall submit to the City, with the plans and specifications, a letter or notation on the design drawings at the time of permit application stating that he or she has reviewed the geotechnical report, understands its recommendations, has explained or has had explained to the owner the risks of loss due to slides on the site, and has incorporated into the design the recommendations of the report and established measures to reduce the potential risk of injury or damage that might be caused by any earth movement predicted in the report.
   e. The owner shall execute a Sensitive Areas Covenant and Hold Harmless Agreement running with the land, on a form provided by the City. The City will file the completed covenant with the King County Department of Records and Elections at the expense of the applicant or owner. A copy of the recorded covenant will be forwarded to the owner.
   f. Whenever the City determines that the public interest would not be served by the issuance of a permit in an area of potential geologic instability without assurance of a means of providing for restoration or
areas disturbed by, and repair of property damage caused by, slides arising out of or occurring during construction, the Director may require assurance devices.

g. Where recommended by the geotechnical report, the applicant shall retain a geotechnical engineer (preferably retain the geotechnical engineer who prepared the final geotechnical recommendations and reviewed the plans and specifications) to monitor the site during construction. If a different geotechnical engineer is retained, the new geotechnical engineer shall submit a letter to the City stating whether or not he/she agrees with the opinions and recommendations of the original study. Further recommendations, signed and sealed by the geotechnical engineer, and supporting data shall be provided should there be exceptions to the original recommendations.

h. During construction the geotechnical engineer shall monitor compliance with the recommendations in the geotechnical report, particularly site excavation, shoring, soil support for foundations including piles, subdrainage installations, soil compaction and any other geotechnical aspects of the construction. Unless otherwise approved by the City, the specific recommendations contained in the soils report must be implemented. The geotechnical engineer shall provide to the City, written, dated monitoring reports on the progress of the construction at such timely intervals as shall be specified. Omissions or deviations from the approved plans and specifications shall be immediately reported to the City. The final construction monitoring report shall contain a statement from the geotechnical engineer that, based upon his or her professional opinion, site observations and testing during the monitoring of the construction, the completed development substantially complies with the recommendations in the geotechnical report and with all geotechnical related permit requirements. Occupancy of the project will not be approved until the report has been reviewed and accepted by the Director.

i. Substantial weight shall be given to ensuring continued slope stability and the resulting public health, safety and welfare in determining whether a development should be allowed.

j. The City may impose conditions that address site work problems which could include, but are not limited to, limiting all excavation and drainage installation to the dry season, or sequencing activities such as installing erosion control and drainage systems well in advance of construction. A permit will be denied if it is determined by the Director that the development will increase the potential of soil movement that results in an unacceptable risk of damage to the proposed development, its site or adjacent properties.

K. Sensitive Areas Permitted Uses and Alterations.

1. General Sensitive Areas Permitted Uses. All uses permitted in the Shoreline Jurisdiction buffers are allowed in sensitive areas within the jurisdiction except:
   a. Promenades
   b. Recreational structures
   c. Public pedestrian bridges
   d. Vehicle bridges
   e. New utilities
   f. Plaza connectors
   g. Water dependent uses and their structures
   h. Essential streets, roads and rights of way
   i. Essential public facilities
   j. Outdoor storage

2. In addition, the following uses are allowed:
   a. Maintenance activities of existing landscaping and gardens in a sensitive area buffer including, but not limited to, mowing lawns, weeding, harvesting and replanting of garden crops and pruning and planting of vegetation. The removal of established native trees and shrubs is not permitted. Herbicide use in sensitive areas or their buffers is not allowed without written permission of the City.
   b. Vegetation maintenance as part of sensitive area enhancement, creation or restoration. Herbicide use in sensitive areas or their buffers is not allowed without written permission of the City.

3. Conditional Uses. Dredging, where necessary to remediate contaminated sediments, if adverse impacts are mitigated, may be permitted.
4. Wetland Alterations. Alterations to wetlands are discouraged, are limited to the minimum necessary for project feasibility, and must have an approved mitigation plan developed in accordance with the standards in this chapter.

a. Mitigation for wetlands shall follow the mitigation sequencing steps in this chapter and may include the following types of actions:

(1) Creation — the manipulation of the physical, chemical, or biological characteristics of a site to develop a wetland on an upland or deepwater site, where a biological wetland did not previously exist;

(2) Re-establishment — the manipulation of the physical, chemical, or biological characteristics of a site with the goal of restoring wetland functions to a former wetland, resulting in a net increase in wetland area and functions;

(3) Rehabilitation — the manipulation of the physical, chemical, or biological characteristics with the goal of repairing historic functions and processes of a degraded wetland, resulting in a gain in wetland function but not acreage;

(4) Enhancement — the manipulation of the physical, chemical, or biological characteristics to heighten, intensify, or improve specific functions (such as vegetation) or to change the growth stage or composition of the vegetation present, resulting in a change in wetland functions but not a gain in wetland acreage; or

(5) A combination of the three types.

b. Allowed alterations per wetland type and mitigation ratios are as follows:

(1) Alterations are not permitted to Category I wetlands unless specifically exempted under the provisions of this Program. Mitigation will still be required at a rate of 4:1 for creation or re-establishment, 8:1 for rehabilitation, and 16:1 for enhancement.

(2) Alterations are not permitted to Category II wetlands unless specifically exempted under the provisions of this Program. Mitigation will still be required at a rate of 3:1 for creation or re-establishment, 6:1 for rehabilitation, and 12:1 for enhancement.

(3) Alterations to Category III wetlands are prohibited except where the location or configuration of the wetland provides practical difficulties that can be resolved by modifying up to .10 (one tenth) of an acre of wetland. Mitigation for any alteration to a Category III wetland must be located contiguous to the altered wetland. Mitigation for any alteration to a Category III wetland must be provided at a ratio of 2:1 for creation or re-establishment, 4:1 for rehabilitation and 8:1 for enhancement alone.

(4) Alterations to Category IV wetlands are allowed, where unavoidable and adequate mitigation is carried out in accordance with the standards of this section. Mitigation for alteration to a Category IV wetland will be 1.5:1 for creation or re-establishment and 3:1 for rehabilitation and 6:1 for enhancement.

(5) Isolated wetlands formed on fill material in highly disturbed environmental conditions and assessed as having low overall wetland functions (scoring below 20 points) may be altered and/or relocated with the permission of the Director. These wetlands may include artificial hydrology or wetlands unintentionally created as the result of construction activities. The determination that a wetland is isolated is made by the US Army Corps of Engineers.

b. Watercourse Alterations. All impacts to a watercourse that degrade the functions and values of the watercourse shall be avoided. If adverse alteration to the watercourse is unavoidable, all adverse impacts shall be mitigated in accordance with the approved mitigation plan as described in this chapter. Mitigation shall take place on site or as close as possible to the impact location, and compensation shall be at a minimum 1:1 ratio. Any mitigation shall result in improved watercourse functions over existing conditions.

a. Diverting or rerouting may only occur with the permission of the Director and an approved mitigation plan, as well as all necessary approvals by state agencies. Any watercourse that has critical wildlife habitat or is necessary for the life cycle or spawning of salmonids shall not be rerouted, unless it can be shown that the habitat will be improved for the benefit of the species. A watercourse may be rerouted or daylighted as a mitigation measure to improve watercourse function.

b. Piping of any watercourse should be avoided. Relocation of a watercourse is preferred to piping; if piping occurs in a watercourse sensitive area, it shall be limited and shall require approval of the Director. Piping of Type 1 watercourses shall not be permitted. Piping may be allowed in Type 2, 3 or 4 watercourses if
City of Tukwila Shoreline Update

it is necessary for access purposes. Piping may be allowed in Type 4 watercourses if the watercourse has a degraded buffer, is located in a highly developed area and does not provide shade, temperature control, etc. for habitat. The applicant must comply with the conditions of this section, including: providing excess capacity to meet the needs of the system during a 100 year flood event, and providing flow restrictors and complying with water quality and existing habitat enhancement procedures.

c. No process that requires maintenance on a regular basis will be acceptable unless this maintenance process is part of the regular and normal facilities maintenance process or unless the applicant can show funding for this maintenance is ensured for as long as the use remains.

d. Piping projects shall be performed pursuant to the following applicable standards:
   1. The conveyance system shall be designed to comply with the standards in current use and recommended by the Department of Public Works.
   2. Where allowed, piping shall be limited to the shortest length possible as determined by the Director to allow access onto a property.
   3. Where water is piped for an access point, those driveways or entrances shall be consolidated to serve multiple properties where possible, and to minimize the length of piping.
   4. When required by the Director, watercourses under drivable surfaces shall be contained in an arch culvert using oversize or super span culverts for rebuilding of a streambed. These shall be provided with check dams to reduce flows, and shall be replanted and enhanced according to a plan approved by the Director.
   5. All watercourse crossings shall be designed to accommodate fish passage. Watercourse crossings shall not block fish passage where the streams are fish bearing.
   6. Stormwater runoff shall be detained and infiltrated to preserve the watercourse channel's dominant discharge.
   7. All construction shall be designed to have the least adverse impact on the watercourse, buffer and surrounding environment.
   8. Piping shall be constructed during periods of low flow, or as allowed by the State Department of Fish and Wildlife.
   9. Water quality must be as good or better for any water exiting the pipe as for the water entering the pipe, and flow must be comparable.

6. Fish and Wildlife Conservation Area Alterations. Alterations to the Green/Duwamish River are regulated by the shoreline provisions of this SMP. Alterations to Fish and Wildlife Conservation Areas that have been created as restoration or habitat enhancement sites and are shown on the Sensitive Areas in the Shoreline Jurisdiction Map are prohibited and may only be authorized through a shoreline variance procedure.

L. Sensitive Areas Mitigation. Mitigation shall be required for any proposals for dredging, filling, piping, diverting, relocation or other alterations of sensitive areas as allowed in this chapter and in accordance with mitigation sequencing and the established mitigation ratios. The mitigation plan shall be developed as part of a sensitive area study by a qualified specialist.

1. Mitigation Sequencing. Applicants shall demonstrate that reasonable efforts have been examined with the intent to avoid and minimize impacts to sensitive areas and buffers. When an alteration to a sensitive area or its required buffer is proposed, such alteration shall be avoided, minimized or compensated for in the following order of preference:
   a. Avoidance of sensitive areas and buffer impacts, whether by finding another site or changing the location of the proposed activity on site;
   b. Minimizing sensitive area and buffer impacts by limiting the degree of impact on site;
   c. Mitigation actions that require compensation by replacing, enhancing, or substitution.

2. Criteria for Approval of Alterations and Mitigation. Alterations and mitigation plans are subject to Director approval, and may be approved only if the following findings are made:
   a. The alteration will not adversely affect water quality;
   b. The alteration will not adversely affect fish, wildlife, or their habitat;
   c. The alteration will not have an adverse effect on drainage and/or stormwater detention capabilities;
City of Tukwila Shoreline Update

d. The alteration will not lead to unstable earth conditions or create an erosion hazard or contribute to scouring actions;

e. The alteration will not be materially detrimental to any other property; and

f. The alteration will not have adverse effects on any other sensitive areas or the shoreline.

g. The mitigation will result in improved functions such as water quality, erosion control, wildlife and fish habitat.

3. Mitigation Location.

a. On site mitigation shall be provided, except where it can be demonstrated that:

(1) On site mitigation is not scientifically feasible due to problems with hydrology, soils, or other factors;

(2) Mitigation is not practical due to potentially adverse impacts from surrounding land uses; or

(3) Existing functional values created at the site of the proposed restoration are significantly greater than lost sensitive area functions; or

(4) Established regional goals for flood storage, flood conveyance, habitat or other sensitive area functions have been established and strongly justify location of mitigation at another site.

b. Off site mitigation shall occur within the shoreline jurisdiction in a location where the sensitive area functions can be restored. Buffer impacts must be mitigated at or as close as possible to the location of the impact.

c. Wetland creation, relocation of a watercourse, or creation of a new fish and wildlife habitat shall not result in the new sensitive area or buffer extending beyond the development site and onto adjacent property without the agreement of the affected property owners, unless otherwise exempted by this chapter.

4. Mitigation Plan Content and Standards. Mitigation Plan Content and Standards.

The scope and content of a mitigation plan shall be decided on a case by case basis. As the impacts to the sensitive area increase, the mitigation measures to offset these impacts will increase in number and complexity. The minimum components of a complete mitigation plan are listed below. For wetland mitigation plans, the format should follow that established in “Wetland Mitigation in Washington State, Part 2 Developing Mitigation Plans” (Washington Department of Ecology, Corps of Engineers, EPA, March 2006, as amended).

a. Baseline information of quantitative data collection or a review and synthesis of existing data for both the project impact zone and the proposed mitigation site.

b. Environmental goals and objectives that describe the purposes of the mitigation measures. This should include a description of site selection criteria, identification of target evaluation species, and resource functions.

c. Performance standards for the specific criteria for fulfilling environmental goals, and for beginning remedial action or contingency measures. They may include water quality standards, species richness and diversity targets, habitat diversity indices, or other ecological, geological or hydrological criteria. The following shall be considered the minimum performance standards for approved sensitive area alterations:

(1) Sensitive area functions and improved habitat for fish and wildlife are improved over those of the original conditions.

(2) Hydrologic conditions, hydroperiods and watercourse channels are improved over existing conditions and the specific performance standards specified in the approved mitigation plan are achieved.

(3) Acreage requirements for enhancement or creation are met.

(4) Vegetation native to the Pacific Northwest is installed and vegetation survival and coverage standards over time are met and maintained.

(5) Buffer and bank conditions and functions exceed the original state.

(6) Stream channel habitat and dimensions are maintained or improved such that the fisheries habitat functions of the compensatory stream reach meet or exceed that of the original stream.

d. A detailed construction plan of the written specifications and descriptions of mitigation techniques. This plan should include the proposed construction sequence and construction management, and be accompanied by detailed site diagrams and blueprints that are an integral requirement of any development proposal.
City of Tukwila Shoreline Update

a. Monitoring and/or evaluation program that outlines the approach and frequency for assessing progress of the completed project. An outline shall be included that spells out how the monitoring data will be evaluated and reported.

b. Maintenance plan that outlines the activities and frequency of maintenance to ensure compliance with performance standards.

c. Contingency plan identifying potential courses of action and any corrective measures to be taken when monitoring or evaluation indicates project performance standards have not been met.

d. Performance security or other assurance devices.

5. Mitigation Timing:

a. Mitigation projects shall be completed prior to activities that will permanently disturb sensitive areas or their buffers and either prior to or immediately after activities that will temporarily disturb sensitive areas.

b. Construction of mitigation projects shall be timed to reduce impacts to existing wildlife, flora, and water quality, and shall be completed prior to use or occupancy of the activity or development. The Director may allow activities that permanently disturb wetlands or watercourses prior to implementation of the mitigation plan under the following circumstances:

1. To allow planting or re-vegetation to occur during optimal weather conditions;
2. To avoid disturbance during critical wildlife periods; or
3. To account for unique site constraints that dictate construction timing or phasing.

c. Monitoring of buffer alterations of all mitigation components shall be required for three to five years. All other alterations shall be monitored for a minimum of five years.

6. Corrective Actions and Monitoring. The Director shall require subsequent corrective actions and long-term monitoring of the project, for a minimum of 5 additional years, if adverse impacts to regulated sensitive areas or their buffers are identified.

7. Recording. The property owner receiving approval of a use or development pursuant to the Shoreline Master Program shall record the City approved site plan clearly delineating the sensitive area and its buffer with the King County Division of Records and Elections. The face of the site plan must include a statement that the provisions of this chapter, as of the effective date of the ordinance from which the Shoreline Management Program derives or is thereafter amended, control use and development of the subject property, and provide for any responsibility of the latent defects or deficiencies.

8. Assurance Device:

a. The Director may require a letter of credit or other security device acceptable to the City, to guarantee performance and maintenance requirements. All assurances shall be on a form approved by the City Attorney.

b. When alteration of a sensitive area is approved, the Director may require an assurance device, on a form approved by the City Attorney, to cover the monitoring costs and correction of possible deficiencies for the term of the approved monitoring and maintenance program.

c. The assurance device shall be released by the Director upon receipt of written confirmation submitted to the Department from the applicant's qualified professional that the mitigation or restoration has met its performance standards and is successfully established. Should the mitigation or restoration meet performance standards and be successfully established in the third or fourth year of monitoring, the City may release the assurance device early. The assurance device may be held for a longer period, if at the end of the monitoring period, the performance standards have not been met or the mitigation has not been successfully established.

d. Release of the security does not absolve the property owner of responsibility for maintenance or correcting latent defects or deficiencies or other duties under law.

(Ord. 2346 §9, 2011)
18.44. \[100080\] Public Access to the Shoreline

A. Applicability.

1. Public access shall be provided on all property that abuts the Green/Duwamish River shoreline in accordance with this section as further discussed below where any of the following conditions are present:
   a. Where a development or use will create increased demand for public access to the shoreline, the development or use shall provide public access to mitigate this impact. For the purposes of this section, an "increase in demand for public access" is determined by evaluating whether the development reflects an increase in the land use intensity (for example converting a warehouse to office or retail use), or a significant increase in the square footage of an existing building. A significant increase is defined as an increase of 3,000 square feet.
   b. Where a development or use will interfere with an existing public access way, the development or use shall provide public access to mitigate this impact. Impacts to public access may include blocking access or discouraging use of existing on-site or nearby accesses.
   c. Where a use or development will interfere with a public use of lands or waters subject to the public trust doctrine, the development shall provide public access to mitigate this impact.
   d. Where the development is proposed by a public entity or on public lands.
   e. Where identified on the Shoreline Public Access Map in the Shoreline Master Program.
   f. Where a land division of five or greater lots, or a residential project of five or greater residential units, is proposed.

2. For the purposes of this section, an "increase in demand for public access" is determined by evaluating whether the development reflects an increase in the land use intensity, for example converting a warehouse to office or retail use, or a significant increase in the square footage of an existing building. A significant increase is defined as an increase of 3,000 square feet. The extent of public access required will be proportional to the amount of increase in the demand for public access. For smaller projects, the Director will review the intent of this section and the scope of the project to determine a reasonable amount of public access to be carried out. Depending on the amount of increase, the project may utilize the alternative provisions for meeting public access in TMC Section 18.44.080(F). The terms and conditions of TMC Sections 18.44.080(A) and (B) shall be deemed satisfied if the applicant and the City agree upon a master trail plan providing for public paths and trails within a parcel or group of parcels.

3. The provisions of this section do not apply to the following:
   a. Short plats of four or fewer lots;
   b. Where providing such access would cause unavoidable health or safety hazards;
   c. Where an area is limited to authorized personnel and providing such access would create inherent and unavoidable security problems that cannot be mitigated through site design or fencing; or
   d. Where providing such access would cause significant ecological impacts that cannot be mitigated.

An applicant claiming an exemption under items 3(b) - (d) above must comply with the procedures in TMC Section 18.44.080(F).

B. General Standards.

1. To improve public access to the Green/Duwamish River, sites shall be designed to provide:
   a. Safe, visible and accessible pedestrian and non-motorized vehicle connections between proposed development and the river’s edge, particularly when the site is adjacent to the Green River Trail or other approved trail system; and
   b. Public pathway entrances that are clearly visible from the street edge, and identified with signage;
   c. Clearly identified pathways that are separate from vehicular circulation areas. This may be accomplished through the use of distinct paving materials, such as precast or cast-in-place concrete, changes in color or distinct and detailed scoring patterns and textures.

Commented [CL51]: This language duplicates the language in A 1 a. above and should be deleted from this section.

Commented [NG52]: This provision was difficult to understand and enforce so we have proposed more specific language.

Commented [NG53]: The City has developed a sign design to indicate shoreline access points.

Commented [MP54]: Brand name.
d. Site elements that are organized to clearly distinguish between public and private access and circulation systems.
2. Required public access shall be fully developed and available for public use at the time of occupancy in accordance with development permit conditions except where the decision maker determines an appropriate mechanism for delayed public access implementation is necessary for practical reasons. Where appropriate, a bond or cash assignment may be approved, on review and approval by the Director of Community Development, to extend this requirement for 90 days from the date the Certificate of Occupancy is issued.
3. Public access easements and related permit conditions shall be recorded on the deed of title or the face of the plat, short plat or approved site plan as a condition tied to the use of the land. Recording with the County shall occur prior to the issuance of an Occupancy Permit or final plat approval. Upon re-development of such a site, the easement may be relocated to facilitate the continued public access to the shoreline.
4. Approved signs indicating the public’s right of access and hours of access, if restricted, shall be constructed, installed and maintained by the applicant in conspicuous locations at public access sites. Signs should be designed to distinguish between public and private areas. Signs controlling or restricting public access may be approved as a condition of permit approval.
5. Required access must be maintained throughout the life of the project.
6. Public access features shall be separated from residential uses through the use of setbacks, low walls, berms, landscaping, or other device of a scale and materials appropriate to the site.
7. Shared public access between developments is encouraged. Where access is to be shared between adjacent developments, the minimum width for the individual access easement may be reduced, provided the total width of easements contributed by each adjacent development equals a width that complies with Fire Department requirements and/or exceeds the minimum for an individual access.
8. Public access sites shall be connected directly to the nearest public area (e.g., street, public park, or adjoining public access easement). Where connections are not currently possible, the site shall be designed to accommodate logical future connections.

C. Requirements for Shoreline Trails. Where public access is required under TMC Section 18.44.100.080(A) above, the requirement will be met by provision of a shoreline trail as follows:
1. Development on Properties Abutting Existing Green River Trail. An applicant seeking to develop property abutting the existing trail shall meet public access requirements by upgrading the trail along the property frontage to meet the standards of a 12-foot-wide trail with 2-foot shoulders on each side. If a 12-foot-wide trail exists on the property, such mean public access requirements have been met if the trail exists within 1000 feet of the property.

2. Development on Properties Where New Regional Trails are Planned. An applicant seeking to develop property abutting the river in areas identified for new shoreline trail segments shall meet public access requirements by dedicating an 18-foot-wide trail easement to the City for public access along the river.

D. Publicly-Owned Shorelines.
1. Shoreline development by any public entities, including but not limited to the City of Tukwila, King County, port districts, state agencies, or public utility districts, shall include public access measures as part of each development project, unless such access is shown to be incompatible due to reasons of safety, security, impact to the shoreline environment or other provisions listed in this section.
2. The following requirements apply to street ends and City-owned property adjacent to the river:
   a. Public right-of-way and "road-ends," or portions thereof, shall not be vacated and shall be maintained for future public access.
   b. Unimproved right-of-ways and portions of right-of-ways, such as street ends and turn-outs, shall be dedicated to public access uses until such time as the portion becomes improved right-of-way. Uses shall be limited to passive outdoor recreation, canoe carry, boat launching, fishing, interpretive/educational uses, and/or parking, which accommodates these uses, and shall be designed so as to not interfere with the privacy of adjacent residential uses.
   c. City-owned facilities within the Shoreline Jurisdiction shall provide new trails and trail connections to the Green River Trail in accordance with approved plans and this SMP.
d. All City-owned recreational facilities within the Shoreline Jurisdiction, unless qualifying for an exemption as specified in this chapter, shall make adequate provisions for:
   (1) Non-motorized and pedestrian access;
   (2) The prevention of trespass onto adjacent properties through landscaping, fencing or other appropriate measures;
   (3) Signage indicating the public right-of-way to shoreline areas; and
   (4) Mechanisms to prevent environmental degradation of the shoreline from public use.

E. Public Access Incentives.
1. The minimum yard setback for buildings, uses, utilities or development from non-riverfront lot lines may be reduced as follows:
   a. Where a development provides a public access corridor between that connects off-site areas, or public shoreline areas to public shoreline areas, one side yard may be reduced to a zero lot line placement; or
   b. Where a development provides additional public access area(s) equal in area to at least 2.5% of total building area, the front yard (the landward side of the development) may be reduced by 50%.
2. The maximum height for structures may be increased by a maximum of 25% when:
   a. Development devotes at least 5% of its building or land area to public shoreline access; or
   b. Development devotes at least 10% of its land area to employee shoreline access.
3. The maximum height for structures under TMC Section 18.44.0570.C.3. and this section may be increased by a maximum of 25% when:
   a. Development devotes at least 5% of its building or land area to public shoreline access; or
   b. Development devotes at least 10% of its land area to employee shoreline access.
   c. The applicant restores or enhances the entire shoreline buffer, including, but not limited to, paved areas no longer in use on the property to offset the impact of the increase in height.
   d. No combination of incentives may be used to gain more than a 25% total height increase for a structure.
4. The maximum height for structures within the shoreline jurisdiction may be increased by 15 feet for properties that construct a 1412-foot-wide paved trail with a 2-foot-wide shoulder on each side for public access along the river in areas identified for new shoreline trail segments, or where, in the case of properties containing or abutting existing public access trails, the existing trail either meets the standard of a 1412-foot-wide trail with 2-foot-wide shoulders on either side or the property owner provides any necessary easements and improvements to upgrade the existing trail to that standard along the property frontage.
4. During the project review, the project proponent shall demonstrate that the increased height will:
   a. Not block the views of a substantial number of residences;
   b. Not cause environmental impacts such as, but not limited to, shading of the river buffer or light impacts adversely affecting the river corridor; and
   c. Achieve no net loss of ecological function; and
   d. Not combine incentives to increase the allowed building height above the maximum height in the parcel’s zoning district. In no case shall the building height be greater than 115 feet pursuant to this provision.

F. Exemptions from Provision of On-Site Public Access.
1. Requirements for providing on-site general public access, as distinguished from employee access, will not apply if the applicant can demonstrate one or more of the following:
   a. Unavoidable health or safety hazards to the public exist such as active railroad tracks or hazardous chemicals related to the primary use that cannot be prevented by any practical means.
   b. The area is limited to authorized personnel and inherent security requirements of the use cannot be satisfied through the application of alternative design features or other solutions.

Commented [NG57]: This reasoning is similar to the prior incentive increase for landscaping. A 6.75 foot increase is of limited value but a 13.5 foot increase could allow for an additional building story.

Commented [NG58]: This duplicates the incentive at 18.44.050 C 3 d.

Commented [NG59]: We have not seen much use of these incentives, therefore this 25% limit is not necessary.

Commented [MP60]: Not necessarily bad from an environmental point-of-view; many flora/fauna thrive in shade environments.

Commented [NG11]: The PC opted to change to a fixed increase rather than a percentage.
d. In lieu of providing public access under this section, at the Director’s discretion, the applicant may provide restoration/enhancement of the shoreline jurisdiction to a scale commensurate with the foregone public access.

Commented [RL61]: This section should not apply to public mitigation projects.

18.44.100 Shoreline Design Guidelines

The Green/Duwamish River is an amenity that should be valued and celebrated when designing projects that will be located along its length. The river and its tributaries support salmon runs and resident trout, including ESA-listed Chinook salmon, Bull Trout and Steelhead. If any portion of a project falls within the shoreline jurisdiction, then the entire project will be reviewed under the Design Review Chapter of the Zoning Code (TMC Ch. 18.60). The standards of TMC Chapter 18.60 shall guide the type of review, whether administrative or by the Board of Architectural Review.

A. Relationship of Structure to Site. Development within the shoreline jurisdiction shall demonstrate compliance with the following:

   a. Respect and reflect the shape of the shoreline;
   b. Orient building elements to site such that public river access, both visual and physical is enhanced;
   c. Orient buildings to allow for casual observation of pedestrian and trail activity from interior spaces;
   d. Site and orient buildings to provide maximum views from building interiors toward the river and the shoreline;
   e. Orient public use areas and private amenities to the river;
   f. Clearly allocate spaces, accommodating parking, vehicular circulation and buildings to preserve existing stands of vegetation or trees so that natural areas can be set aside, improved, or integrated into site organization and planning;

Commented [NG12]: The PC removed this in response to a public comment that ESA requirements should not be mixed with design guidelines.
2. Building Design. Development within the shoreline jurisdiction shall demonstrate compliance with the following:

a. To prevent building mass and shape from overwhelming the desired human scale along the river, development shall avoid blank walls on the public and river sides of buildings.

b. Buildings should be designed to follow the curve of the river and respond to changes in topography; buildings must not “turn their back” to the river.

c. Design common areas in buildings to take advantage of shoreline views and access; incorporate outdoor seating areas that are compatible with shoreline access.

d. Consider the height and scale of each building in relation to the site.

e. Extend site features such as plazas that allow pedestrian access and enjoyment of the river to the landward side of the buffer’s edge.

f. Locate lunchrooms and other common areas to open out onto the water-ward side of the site to maximize enjoyment of the river.

g. Design structures to take advantage of the river frontage location by incorporating features such as:
   (1) plazas and landscaped open space that connect with a shoreline trail system;
   (2) windows that offer views of the river; or
   (3) pedestrian entrances that face the river.

h. View obscuring fencing is permitted only when necessary for documentable use requirements and must be designed with landscaping per the Vegetation Protection and Landscaping Section. Other fencing, when allowed, must be designed to complement the proposed and/or existing development materials and design; and

i. Where there are public trails, locate any fencing between the site and the landward side of the shoreline trail.

3. Design of Public Access. Development within the shoreline jurisdiction shall demonstrate compliance with the following:

a. Public access shall be barrier free, where feasible, and designed consistent with the Americans with Disabilities Act.

b. Public access landscape design shall use native vegetation, in accordance with the standards in the Vegetation Protection and Landscaping Section. Additional landscape features may be required where desirable to provide public/private space separation and screening of utility, service and parking areas.

c. Furniture used in public access areas shall be appropriate for the proposed level of development, and the character of the surrounding area. For example, large urban projects should provide formal benches; for smaller projects in less-developed areas, simpler, less formal benches or suitable alternatives such as boulders are appropriate.

d. Materials used in public access furniture, structures or sites shall be:
   (1) Durable and capable of withstanding exposure to the elements;
   (2) Environmentally friendly and take advantage of technology in building materials, lighting, paved surfacing, porous pavement, etc. wherever practical; and
   (3) Consistent with the character of the shoreline and the anticipated use.

e. Public/Private Separation.
   (1) Public access facilities shall look and feel welcoming to the public, and not appear as an intrusion into private property.

   (2) Natural elements such as logs, grass, shrubs, and elevation separations are encouraged as means to define the separation between public and private space.

4. Design of Flood Walls. The exposed new floodwalls should be designed to incorporate brick or stone facing, textured concrete block, design elements turned into the concrete or vegetation to cover the wall within 3 years.

(Ord. 2346 §11, 2011)

Commented [RL62]: Large rocks have been used for “benches” on habitat projects. I think we should encourage this type of installation.
18.44.120 Shoreline Restoration

A. Shoreline Substantial Development Permit Not Required. Shoreline restoration projects shall be allowed without a Shoreline Substantial Development Permit when these projects meet the criteria established by WAC 173-27-040(o) and (p) and RCW 90.58.580.

B. Changes in Shoreline Jurisdiction Due to Restoration.

1. Relief may be granted from Shoreline Master Program standards and use regulations in cases where shoreline restoration projects result in a change in the location of the OHWM and associated Shoreline Jurisdiction and/or critical area buffers on the subject property and/or adjacent properties, and where application of this chapter’s regulations would preclude or interfere with the uses permitted by the underlying zoning, thus presenting a hardship to the project proponent.
   a. Applications for relief, as specified below, must meet the following criteria:
      (1) The proposed relief is the minimum necessary to relieve the hardship;
      (2) After granting the proposed relief, there is net environmental benefit from the restoration project; and
      (3) Granting the proposed relief is consistent with the objectives of the shoreline restoration project and with the Shoreline Master Program.
   b. The Department of Ecology must review and approve applications for relief.
   c. For the portion of property that moves from outside Shoreline Jurisdiction to inside Shoreline Jurisdiction as a result of the shoreline restoration project, the City may consider the following, consistent with the criteria in TMC Section 18.44.120.B.1.a.
      (1) permitting development for the full range of uses of the underlying zoning consistent with the Zoning Code, including uses that are not water oriented;
      (2) waiving the requirement to obtain a shoreline substantial development permit if it is otherwise exempt from the requirement for a substantial development permit;
      (3) waiving the provisions for public access;
      (4) waiving the requirement for shoreline design review; and
      (5) waiving the development standards set forth in this chapter.
   d. The intent of the exemptions identified above in subparagraphs B.1.c.(1) to B.1.c.(5) is to implement the restoration projects of the Shoreline Master Program Restoration Plan, which reflects the projects identified in the Water Resource Inventory Area (WRIA) B Plan pursuant to Policy 5.2 of the SMP.

2. Consistent with provisions in TMC Section 18.44.050.C, building heights within shoreline jurisdiction may be increased if the project proponent provides additional restoration and/or enhancement of the shoreline buffer, beyond what may otherwise be required in accordance with the standards of TMC Section 18.44.060, “Vegetation Protection and Landscaping.” Additional Restoration and/or enhancement shall include:
   a. creation of shallow-water (max slope 5H:1V) off channel rearing habitat and/or
   b. removal of fish passage barriers to known or potential fish habitat, and restoration of the barrier site.

3. Consistent with the provisions of subparagraphs B.1.a, 1.b and 1.c above, the Shoreline Residential Environment Buffer, High Intensity, or Urban Conservancy Environment, or critical area Buffer width may be reduced to no less than 25 feet measured from the new location of the OHWM for the portion of the property that moves from outside the Shoreline Jurisdiction to inside Shoreline Jurisdiction as a result of the shoreline restoration project, subject to the following standards:
   a. The 25-foot buffer area must be vegetated according to the requirements of the Vegetation Protection and Landscaping Section or as otherwise approved by the City; and
   b. The proponents of the restoration project are responsible for the installation and maintenance of the vegetation.

4. The habitat restoration project proponents must record with King County a survey that identifies the location of the OHWM location prior to implementation of the shoreline restoration project, any structures...
that fall within the Shoreline Jurisdiction, and the new location of the OHWM once construction of the shoreline restoration project is completed.

5. Shoreline restoration projects must obtain all U.S. Army Corps of Engineers and Washington State Department of Fish and Wildlife approvals as well as written approval from the City. 

(Ord. 2346 §12, 2011)

18.44.110 Administration

A. Applicability of Shoreline Master Program and Substantial Development Permit.

1. Development in the Shoreline Jurisdiction. Based on guidelines in the SMA for a Minimum Shoreline Jurisdiction, Tukwila's Shoreline Jurisdiction is defined as follows: The Tukwila Shoreline Jurisdiction includes the channel of the Green/Duwamish River, its banks, the upland area which extends from the OHWM landward for 200 feet on each side of the river, floodways and all associated wetlands within its floodplain. The floodway shall not include those lands that have historically been protected by flood control devices and therefore have not been subject to flooding with reasonable regularity.

2. Applicability. The Tukwila SMP applies to uses, change of uses, activities or development that occurs within the above-defined Shoreline Jurisdiction. All proposed uses and development occurring within the Shoreline Jurisdiction must conform to Chapter 90.58 RCW, the SMA, and this chapter whether or not a permit is required.

B. Relationship to Other Codes and Regulations

1. Compliance with this Master Program does not constitute compliance with other federal, state, and local regulations and permit requirements that may apply. The applicant is responsible for complying with all other applicable requirements.

2. Where this Master Program makes reference to any RCW, WAC, or other state or federal law or regulation, the most recent amendment or current edition shall apply.

3. In the case of any conflict between any federal, state, or other local law and this Master Program, the provision that is most protective of shoreline resources shall prevail, except when constrained by federal or state law, or where explicitly provided in this Master Program.

4. Relationship to Critical Areas Regulations.

A. For protection of critical areas where they occur in shoreline jurisdiction, this Master Program adopts by reference the City’s Critical Areas Ordinance, which is incorporated into this Master Program with specific exclusions and modifications as set forth in TMC Section 18.44.070.

B. All references to the Critical Areas Ordinance are for the version adopted [CAO adoption date]. Pursuant to WAC 173-26-191(2)(b), amending the referenced regulations in the Master Program for those critical areas under shoreline jurisdiction will require an amendment to the Master Program and approval by the Department of Ecology.

C. Within shoreline jurisdiction, the Critical Areas Ordinance shall be liberally construed together with this Master Program to give full effect to the objectives and purposes of the provisions of this Master Program and Chapter 90.58 RCW.

C. Developments not required to obtain shoreline permits or local reviews. Requirements to obtain a substantial development permit, conditional use permit, variance, letter of exemption, or other review to implement the Shoreline Management Act do not apply to the following actions as described in WAC 173-27044 and WAC 173-27-045:

1. Remedial actions. Pursuant to RCW 90.58.355, any person conducting a remedial action at a facility pursuant to a consent decree, order, or agreed order issued pursuant to chapter 70.105D RCW, or to the department of ecology when it conducts a remedial action under chapter 70.105D RCW.

2. Boatyard improvements to meet NPDES permit requirements. Pursuant to RCW 90.58.355, any person installing site improvements for storm water treatment in an existing boatyard facility to meet requirements of a national pollutant discharge elimination system storm water general permit.

3. WSDOT facility maintenance and safety improvements. Pursuant to RCW 90.58.356, Washington State Department of Transportation projects and activities meeting the conditions of RCW 90.58.356 are not required to obtain a substantial development permit, conditional use permit, variance, letter of exemption, or other local review.

4. Projects consistent with an environmental excellence program agreement pursuant to RCW 90.58.045. (v). Projects authorized through the Energy Facility Site Evaluation Council process, pursuant to chapter 80.50 RCW.

D. Substantial Development Permit Requirements.

1. Permit Application Procedures. Applicants for a Shoreline Substantial Development Permit shall comply with permit application procedures in TMC Chapter 18.104.

2. Exemptions.
   a. To qualify for an exemption, the proposed use, activity or development must meet the requirements for an exemption as described in WAC 173-27-040, except for properties that meet the requirements of the Shoreline Restoration Section, TMC Section 18.44.120. The purpose of a shoreline exemption is to provide a process for uses and activities which do not trigger the need for a Substantial Development Permit, but require compliance with all provisions of the City’s SMP and overlay districts.
   b. The Director may impose conditions to the approval of exempted developments and/or uses as necessary to assure compliance of the project with the SMA and the Tukwila SMP, per WAC 173-27-040(e).

3. A substantial development permit shall be granted only when the development proposed is consistent with:
   a. The policies and procedures of the Shoreline Management Act;
   b. The provisions of Chapter 173-27, WAC; and
   c. This Shoreline Master Program.

E. Shoreline Conditional Use Permit.

1. Purpose. As stated in WAC 173-27-160, the purpose of a Conditional Use Permit (CUP) is to allow greater flexibility in the application of use regulations of this chapter in a manner consistent with the policies of RCW 90.58.020. In authorizing a conditional use, special conditions may be attached to the permit by the City or the Department of Ecology to prevent undesirable effects of the proposed use and/or assure consistency of the project with the SMA and the City’s SMP. Uses which are specifically prohibited by the Shoreline Master Program may not be authorized with approval of a CUP.

2. Application. Shoreline Conditional Use Permits are a Type 4 Permit processed under TMC Chapter 18.104.

3. Application requirements. Applicants must meet all requirements for permit application and approvals indicated in TMC Chapter 18.104 and this chapter.

4. Approval Criteria.
   a. Uses classified as shoreline conditional uses may be authorized, provided that the applicant can demonstrate all of the following:
      (1) The proposed use will be consistent with the policies of RCW 90.58.020 and the policies of the Tukwila Shoreline Master Program;
      (2) The proposed use will not interfere with the normal public use of public shorelines;
City of Tukwila Shoreline Update

(3) The proposed use of the site and design of the project will be compatible with other permitted uses within the area and with uses planned for the area under the Comprehensive Plan and this chapter;

(4) The proposed use will cause no significant adverse effects to the shoreline environment in which it is to be located; and

(5) The public interest suffers no substantial detrimental effect.

b. In the granting of all Conditional Use Permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example, if Conditional Use Permits were granted to other developments in the area where similar circumstances exist, the total of the conditional uses shall also remain consistent with the policies of RCW 90.58 and all local ordinances and shall not produce substantial adverse effects to the shoreline environment.

Shoreline Variance Permits.

1. Purpose. The purpose of a Shoreline Variance Permit is strictly limited to granting relief from specific bulk, dimensional, or performance standards set forth in this chapter where there are extraordinary or unique circumstances relating to the physical character or configuration of property such that the strict implementation of this chapter will impose unnecessary hardships on the applicant or thwart the Shoreline Management Act policies as stated in RCW 90.58.020. Reasonable use requests that are located in the shoreline must be processed as a variance, until such time as the Shoreline Management Act is amended to establish a process for reasonable uses. Variances from the use regulations of this chapter are prohibited.

2. Application requirements. Applicants must meet all requirements for a Type 3 permit application and approvals indicated in TMC Chapter 18.104.

3. Shoreline Variance Permits should be granted in circumstances where denial of the permit would result in a thwarting of the policy enumerated in RCW 90.58.020. In all instances the applicant must demonstrate that extraordinary circumstances exist and the public interest will suffer no substantial detrimental effect.

4. Approval Criteria. A Shoreline Variance Permit for a use, activity or development that will be located landward of the ordinary high water mark and/or landward of any wetland may be authorized provided the applicant can demonstrate all of the following:

a. The strict application of the bulk, dimensional, or performance standards set forth in this chapter preclude or significantly interfere with a reasonable use of the property not otherwise prohibited by this chapter.

b. The hardship described in TMC Section 18.44.1130, DF, 4, is specifically related to the property and is the result of unique conditions such as irregular lot shape, size, or natural features and the application of this chapter, and not from the owner's own actions or deed restrictions; and that the variance is necessary because of these conditions in order to provide the owner with use rights and privileges permitted to other properties in the vicinity and zone in which the property is situated.

c. The design of the project will be compatible with other authorized uses within the area and with uses planned for the area under the Comprehensive Plan and SMP and will not cause adverse impacts to adjacent properties or the shoreline environment.

d. The variance will not constitute a grant of special privilege not enjoyed by other properties in the area.

e. The variance is the minimum necessary to afford relief.

f. The public interest will suffer no substantial detrimental effect.

g. In the granting of all variance permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area such that the total of the variances would remain consistent with RCW 90.58.020 and not cause substantial adverse effects to the shoreline environment.

5. Shoreline Variance Permits Waterward of OHWM.

a. Shoreline variance permits for development and/or uses that will be located either landward of the ordinary high water mark or within any sensitive, critical area may be authorized only if the applicant can demonstrate all of the following:
The strict application of the bulk, dimensional or performance standards set forth in this Master Program preclude all reasonable permitted use of the property;

(2) The proposal is consistent with the criteria established under TMC Section 18.44.130, “Approval Criteria,” b. through g., and

(3) The public rights of navigation and use of the shorelines will not be adversely affected by the granting of the variance.

Commented [CL65]: “b.” and “c” apply to all Variance requests not just to permit waterward of the OHWM.

Commented [CL66]: Same comment as for “b.” above.

Commented [NG67]: This provision covers existing animal rendering facilities.

Commented [NG68]: Covered by a above.

Commented [NG69]: This is addressed in e above.

b. In the granting of all variance permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area such that the total of the variances would remain consistent with RCW 90.58.020 and not cause substantial adverse effects to the shoreline environment.

c. Variances from the use regulations of this chapter are prohibited.

GE. Non-Conforming Development.

1. Non-Conforming Uses. Any non-conforming lawful use of land that would not be allowed under the terms of this chapter may be continued as an allowed, legal, non-conforming use, defined in TMC Chapter 18.06 or as hereafter amended, so long as that use remains lawful, subject to the following:

a. No such non-conforming use shall be enlarged, intensified, increased, moved or extended to occupy a greater use of the land, structure or combination of the two, than was occupied at the effective date of adoption of this chapter except as authorized in TMC Section 18.66.120 or upon approval of a conditional use permit.

b. No non-conforming use shall be moved or extended in whole or in part to any other portion of the lot or parcel occupied by such use on the effective date of adoption of this chapter.

c. If any such non-conforming use ceases for any reason for a period of more than 24 consecutive months the non-conforming rights shall expire and any subsequent use shall conform to the regulations specified by this chapter.

d. If a change of use is proposed to a use determined to be non-conforming by application of provisions in this chapter, the proposed new use must be a permitted use in this chapter or a use approved under a Type 2 permit with public notice process. For purposes of implementing this section, a change of use constitutes a change from one permitted or conditional use category to another such use category as listed within the Shoreline Use Matrix.

e. A structure that is being or has been used for a non-conforming use may be used for a different non-conforming use only upon the approval of a Type 2 permit subject to public notice. Before approving a change in non-conforming use, the following findings must be made:

(1) No reasonable alternative conforming use is practical.

(2) The proposed use will be at least as consistent with the policies and provisions of the SMP and as compatible with the uses in the area as the non-conforming use.

(3) The use or activity is enlarged, intensified, increased or altered only to the minimum amount necessary to achieve the intended functional purpose.

(4) The structure(s) associated with the non-conforming use shall not be expanded in a manner that increases the extent of the non-conformity.

(5) The change in use will not create adverse impacts to shoreline ecological functions and/or processes.

(6) The applicant restores and/or enhances the entire shoreline buffer, including but not limited to, paved areas no longer in use on the property, to offset the impact of the change of use per the vegetation management standards of this chapter. This may include the restoration of paved areas to vegetated area if no longer in use.

(2) The use complies with the Type 2 permit process of TMC Chapter 18.104.

(3) The preference is to reduce exterior uses in the buffer to the maximum extent possible.
2. Non-Conforming Structures. Where a lawful structure exists on the effective date of adoption of this chapter that could not be built under the terms of this chapter by reason of restrictions on height, buffers or other characteristics of the structure, it may be continued as an allowed, legal structure so long as the structure remains otherwise lawful subject to the following provisions:

a. Such structures may be repaired, maintained, upgraded and altered provided that:
   (1) The structure may not be enlarged or altered in such a way that increases its degree of nonconformity or increases its impacts to the functions and values of the shoreline environment except as authorized in TMC Section 18.66.120; and
   (2) If the structure is located on a property that has no reasonable development potential outside the shoreline buffer, there shall be no limit on the cost of alterations. If the structure is located on a property that has reasonable development potential outside the shoreline buffer, the cost of the alterations may not exceed an aggregate cost of 50% of the value of the building or structure in any 3-year period based upon its most recent assessment, unless the amount over 50% is used to make the building or structure more conforming, or is used to restore to a safe condition any portion of a building or structure declared unsafe by a proper authority.

b. Should such structure be destroyed by any accidental means, the structure may be reconstructed to its original dimensions and location on the lot provided application is made for permits within 12 months of the date the damage occurred and all reconstruction is completed within two years of permit issuance. In the event the property is redeveloped, such redevelopment must be in conformity with the provisions of this chapter.

c. Should such structure be moved for any reason or any distance, it must be brought as closely as practicable into conformance with the Master Program and the Shoreline Management Act. Whatever it shall thereafter conform to the regulations of this chapter after it is moved.

d. When a non-conforming structure, or structure and premises in combination, is vacated or abandoned for 24 consecutive months, the structure, or structure and premises in combination, shall thereafter be required to be in conformance with the regulations of this chapter. Upon request of the owner, prior to the end of the 24 consecutive months and upon reasonable cause shown, the City Council may grant an extension of time beyond the 24 consecutive months may be granted using the criteria in TMC Section 18.44.1130.EG.4.

e. Residential structures located in any Shoreline Residential Environment and in existence at the time of adoption of this chapter shall not be deemed nonconforming in terms of height, residential use, or location provisions of this title. Such buildings may be rebuilt after a fire or other natural disaster to their original dimensions, location and height, but may not be changed except as provided in the non-conforming uses section of this chapter.

f. Single-family structures in the Shoreline Residential Environment that have legally nonconforming setbacks from the OHWM per the SMP buffer shall be allowed to expand the ground floor only along the existing building line(s) as long as the existing distance from the nearest point of the structure to the OHWM is not reduced and the square footage of new intrusion into the buffer does not exceed 50% of the square footage of the current intrusion. As a condition of building permit approval, a landscape plan showing removal of invasive plant species within the entire shoreline buffer and replanting with appropriate native species must be submitted to the City. Plantings should be maintained through the establishment period.

g. A non-conforming use, within a non-conforming structure, shall not be allowed to expand into any other portion of the structure.

3. For the purposes of this section, altered or partially reconstructed is defined as work that does not exceed 50% of the assessed valuation of the building over a three-year period.

4. Requests for Time Extension—Non-conforming Uses and Structures

a. A property owner may request, prior to the end of the 24 consecutive months, an extension of time beyond the 24 consecutive months. Such a request shall be considered as a Type 2 permit under TMC Chapter 18.104 and may be approved only when:
   (1) For a non-conforming use, a finding is made that no reasonable alternative conforming use is practical.
   (2) For a non-conforming structure, special economic circumstances prevent the lease or sale of said structure within 24 months.

   (3) The applicant restores and/or enhances the shoreline buffer on the property to offset the impact of the continuation of the non-conforming use. For non-conforming uses, the amount of buffer to be
restored and/or enhanced will be determined based on the percentage of the existing building used by the non-conforming use for which a time extension is being requested. Depending on the size of the area to be restored and/or enhanced, the Director may require targeted plantings rather than a linear planting arrangement. The vegetation management standards of this program shall be used for guidance on any restoration/enhancement. For non-conforming structures, for each six-month extension of time requested, 15% of the available buffer must be restored/enhanced.

b. Conditions may be attached to the permit that are deemed necessary to assure compliance with the above findings, the requirements of the Master Program and the Shoreline Management Act and to assure that the use will not become a nuisance or a hazard.

5. Building Safety. Nothing in this SMP shall be deemed to prevent the strengthening or restoring to a safe condition of any non-conforming building or part thereof declared to be unsafe by order of any City official charged with protecting the public safety.

a. Alterations or expansion of a non-conforming structure that are required by law or a public agency in order to comply with public health or safety regulations are the only alterations or expansions allowed.

b. Alterations or expansions permitted under this section shall be the minimum necessary to meet the public safety concerns.

a. Nothing contained in this chapter shall be construed to require a change in any aspect of a structure or facility covered thereunder including, without limitation, parking lot layout, loading space requirements and curb-cuts, for any structure or facility which existed on the date of adoption of this chapter.

b. If a change of use takes place or an addition is proposed that requires an increase in the parking area by an increment less than 100%, the requirements of this chapter shall be complied with for the additional parking area.

c. If a property is redeveloped, a change of use takes place or an addition is proposed that requires an increase in the parking area by an increment greater than 100%, the requirements of this chapter shall be complied with for the entire parking area. If no change in parking lot area is proposed, a non-conforming parking lot may be upgraded to improve water quality or meet local, state, and federal regulations.

d. The area beneath a non-conforming structure may be converted to a contiguous parking lot area if the non-conforming structure is demolished.

7. Non-Conforming Landscape Areas.

a. Adoption of the vegetation protection and landscaping regulations contained in this chapter shall not be construed to require a change in the landscape improvements for any legal landscape area that existed on the date of adoption of this chapter, unless and until the property is redeveloped or alteration of the existing structure is made beyond the thresholds provided herein.

b. At such time as the property is redeveloped or the existing structure is altered beyond the thresholds provided herein and the associated premises does not comply with the vegetation protection and landscaping requirements of this chapter, a landscape plan that conforms to the requirements of this chapter shall be submitted to the Director for approval.

H. Revisions to Shoreline Permits

1. Revisions to previously issued shoreline permits shall be reviewed under the SMP in effect at the time of submittal of the revision, and not the SMP under which the original shoreline permit was approved and processed in accordance with WAC 173-27-100.

I. Time Limits on Shoreline Permits

1. Consistent with WAC 173-27-090, shoreline permits are valid for two years, and the work authorized under the shoreline permit must be completed in five years. Construction activity must begin within this two-year period. If construction has not begun within two years, a one-time extension of one year may be approved by the Director based on reasonable factors. The permit time period does not include the time during which administrative appeals or legal actions are pending or due to the need to obtain any other government permits and approvals for the project.

2. Upon a finding of good cause, based on the requirements and circumstances of a proposed project, and consistent with the City’s Shoreline Master Program, the City may adopt a different time limit.
18.44.140 Appeals

Any appeal of a decision by the City on a Shoreline Substantial Development Permit, Shoreline Conditional Use or Shoreline Variance must be appealed to the Shoreline Hearing Board.

(Ord. 2346 §13, 2011)

18.44.150 Enforcement and Penalties

A. Violations. The following actions shall be considered violations of this chapter:

1. To use, construct or demolish any structure, or to conduct clearing, earth-moving, construction or other development not authorized under a Substantial Development Permit, Conditional Use Permit or Variance Permit, where such permit is required by this chapter.

2. Any work which is not conducted in accordance with the plans, conditions, or other requirements in a permit approved pursuant to this chapter, provided that the terms or conditions are stated in the permit or the approved plans.

3. To remove or deface any sign, notice, complaint or order required by or posted in accordance with this chapter.

4. To misrepresent any material fact in any application, plans or other information submitted to obtain any shoreline use or development authorization.

5. To fail to comply with the requirements of this chapter.

B. Enforcement. It shall be the duty of the Director to enforce this chapter subject to the terms and conditions of TMC Chapter 8.45.

C. Inspection Access.

1. For the purpose of inspection for compliance with the provisions of a permit or this chapter, authorized representatives of the Director may enter all sites for which a permit has been issued.

2. Upon completion of all requirements of a permit, the applicant shall request a final inspection by contacting the planner of record. The permit process is complete upon final approval by the planner.

D. Penalties.

1. Any violation of any provision of the SMP, or failure to comply with any of the requirements of this chapter shall be subject to the penalties prescribed in Chapter 8.45 of the Tukwila Municipal Code (“Enforcement”) and shall be imposed pursuant to the procedures and conditions set forth in that chapter.

2. Penalties assessed for violations of the SMP shall be determined by TMC Chapter 8.45.120.100, Penalties.

3. It shall not be a defense to the prosecution for failure to obtain a permit required by this chapter, that a contractor, subcontractor, person with responsibility on the site, or person authorizing or directing the work, erroneously believed a permit had been issued to the property owner or any other person.

4. Penalties for Tree Removal

   a. Each unlawfully removed or damaged tree shall constitute a separate violation.

   b. The amount of the penalty shall be $1,000 per tree or up to the marketable value of each tree removed or damaged as determined by an ISA certified arborist. The Director may elect not to seek penalties or may reduce the penalties if he/she determines the circumstances do not warrant imposition of any or all of the civil penalties.

   c. Any illegal removal of required trees shall be subject to obtaining a tree permit and replacement with trees that meet or exceed the functional value of the removed trees. In addition, any shrubs and groundcover removed without City approval shall be replaced.

   d. To replace the tree canopy lost due to the tree removal, additional trees must be planted on-site. Payment may be made into the City’s Tree Fund if the number of replacement trees cannot be accommodated on-site. The number of replacement trees required will be based on the size of the tree(s) removed as stated in TMC 18.44.060 B 4.
E. Remedial Measures Required. In addition to penalties provided in TMC Chapter 8.45, the Director may require any person conducting work in violation of this chapter to mitigate the impacts of unauthorized work by carrying out remedial measures.

1. Remedial measures must conform to the policies and guidelines of this chapter and the Shoreline Management Act.

2. The cost of any remedial measures necessary to correct violation(s) of this chapter shall be borne by the property owner and/or applicant.

F. Injunctive Relief.

1. Whenever the City has reasonable cause to believe that any person is violating or threatening to violate this chapter or any rule or other provisions adopted or issued pursuant to this chapter, it may, either before or after the institution of any other action or proceeding authorized by this ordinance, institute a civil action in the name of the City for injunctive relief to restrain the violation or threatened violation. Such action shall be brought in King County Superior Court.

2. The institution of an action for injunctive relief under this section shall not relieve any party to such proceedings from any civil or criminal penalty prescribed for violations of the Master Program.

G. Abatement. Any use, structure, development or work that occurs in violation of this chapter, or in violation of any lawful order or requirement of the Director pursuant to this section, shall be deemed to be a public nuisance and may be abated in the manner provided by the Tukwila Municipal Code 8.45.105.

(Ord. 2346 §15, 2011)

18.44.160 Liability

A. Liability for any adverse impacts or damages resulting from work performed in accordance with a permit issued on behalf of the City within the City limits shall be the sole responsibility of the owner of the site for which the permit was issued.

B. No provision of or term used in this chapter is intended to impose any duty upon the City or any of its officers or employees that would subject them to damages in a civil action.

(Ord. 2346 §16, 2011)

AMENDMENTS TO OTHER ZONING CODE SECTIONS

18.52.030 Shoreline Landscape Requirements

Additional landscape requirements apply in the Shoreline Overlay District, as directed by TMC Section 18.44.060, Vegetation Protection and Landscaping.

18.60.050 Board of Architectural Review

H. Shoreline Design Criteria. The criteria contained in the Shoreline Design Guidelines (TMC Section 18.44.090) shall be used whenever the provisions of this title require a design review decision on a proposed or modified development in the Shoreline Overlay District.
